New magazine all about DC motors and their use.

The latest edition of maxon motors magazine is out now and full of new applications and innovations.

DC motors in medical applications are heavily featured in this edition of the magazine. In particular the daVinci surgical robot, cardiac applications and wireless tattoo guns. We see insights from leading surgeons using motor driven tools and the use of pumps in cardiac applications. Dr Anthony Mayr takes us through the intricacies of design engineering for theatre environments. The topic of energy efficiency for small DC motor applications is researched and it is revealed why the physics can influence this just as heavily as the DC motor control electronics.
