Media Release

DC motors in cameras

A small DC motor and gearhead was specially designed for the Leica S system camera. With near-zero lag time the camera is perfect for action photography.

maxon motor was able to use a standard A-max 12 motor, connected to a tailor-made gearhead that was altered to suit the very specific needs of the application. Installed into the central shutter of the camera, the entire DC motor and gearhead unit needed to be compact, enclosed and sealed with the ability to produce more than 100,000 releases over the course of its life.

For further information please contact an application engineer on +61 2 9457 7477.
