

New size BLDC motor released from maxon: perfect for robotics & hand-held device applications.

A powerful and cost-effective BLDC motor in a new 30mm diameter is now available from maxon motor.

Now available in a new size and two versions, is the powerful, high torque and low cogging brushless DC motor. The new size EC-i DC motor has a diameter of 30 millimeters and is available in two lengths, each in a Standard and a High Torque version, with a maximum nominal torque of up to 110 mNm at 75 W.

maxon's EC-i 30 DC motors are a cost-effective alternative to comparable maxon DC motor offerings. The motors have a compact design but are very powerful, making them especially suitable for hand-held devices and applications in robotics. Like other maxon BLDC motors, this range can also be expanded with encoders, gearheads, servo controllers or positioning controllers from maxon.
