Media Release

maxon DC motor control software and firmware updates.

maxon motor have released new software and firmware for the EPOS DC motor position controllers.

Available immediately for maxon EPOS 4 motion controllers are the latest firmware and software releases giving additional functionality supporting the new EtherCAT adaptation module. The release support the entire power range of both stand along position controllers and also the range of OEM style controller modules. The files for the latest firmware version 0130h can be found on the maxon motor website along with the new software version 3.3 of maxon motors configuration studio and GUI. New features of implemented with the firmware update include EtherCAT CoE communication for EPOS 4 units fitted with EtherCAT extensions, Cyclic Synchronus Position Mode and a new object for storage of custom values. Anti-windup behaviour has been further improved along with improved automatic bitrate detection. The new EPOS command library 6.3.1.0 including Windows DLL, .Net Library, LabView instrument driver and Linux Library is also available on the maxon motor website. All documentation has been updated to November/December 2017 edition. New deliveries will include the updates and a leaflet will be included in every shipment.

For further information or assistance contact maxon motor Australia on +61 2 9457 7477.
