

Tailored DC motors now offered as general catalogue products.

Introducing the Ec-i 52 200W High Power DC motor.

The EC-i 52 200W High Torque DC motor was launched as a customer specific project and is now offered as a standard catalogue product. The DC motor has an extended length from 80mm to 110mm. Compared to the current offering the EC-i 52 180W High Torque DC motor, this version offers a 50% higher torque and speed/ torque gradient with a flux collector rotor providing outstanding torque performance. Suitable for a variety of industrial automation applications, extra power can be achieved at a relatively low speed range. In the maxon modular system, the EC-i 52 200W can be paired with the powerful maxon GP 52 C gearhead as well as various encoders and controllers.

For more information please contact maxon motor Australia tel. +61 9457 7477.
