READ THIS FIRST

These instructions are intended for qualified technical personnel. Prior commencing with any activities...

- you must carefully read and understand this manual and
- you must follow the instructions given therein.

EPOS positioning controllers are considered as partly completed machinery according to EU Directive 2006/42/EC, Article 2, Clause (g) and are intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment.

Therefore, you must not put the device into service,...

- unless you have made completely sure that the other machinery fully complies with the EU directive's requirements!
- unless the other machinery fulfills all relevant health and safety aspects!
- unless all respective interfaces have been established and fulfill the herein stated requirements!

1 ABOUT THIS DOCUMENT

We strongly stress the following facts:

- *The present document does not replace any other documentation covering the basic installation and/or parameterization described therein!*
- *Also, any aspect in regard to health and safety as well as to secure and safe operation are not covered in the present document – it is intended and must be understood as complimenting addition to those documents!*

1.1 Intended Purpose

The present document provides instructions on the implemented functions of the...

- Windows Dynamic-Link Libraries «EposCmd.dll» and «EposCmd64.dll», as well as the
- Linux Shared Object Library «libEposCmd.so»

...which can be used for EPOS, EPOS2, and EPOS4 devices.

In addition, the document explains on how to integrate the DLLs into a variety of common programming environments.

1.2 Target Audience

This document is meant for trained and skilled personnel working with the equipment described. It conveys information on how to understand and fulfill the respective work and duties.

This document is a reference book. It does require particular knowledge and expertise specific to the equipment described.

1.3 How to use

Take note of the following notations and codes which will be used throughout the document.

| Notation | Explanation |
|----------|--|
| EPOS2 | stands for “EPOS2 Positioning Controller” |
| EPOS4 | stands for “EPOS4 Positioning Controller” |
| «Abcd» | indicating a title or a name (such as of document, product, mode, etc.) |
| ▣Abcd▣ | indicating an action to be performed using a software control element (such as folder, menu, drop-down menu, button, check box, etc.) or a hardware element (such as switch, DIP switch, etc.) |
| (n) | referring to an item (such as order number, list item, etc.) |
| → | denotes “see”, “see also”, “take note of” or “go to” |

Table 1-1 Notations used in this document

1.4 Symbols and Signs

Requirement / Note / Remark

Indicates an action you must perform prior continuing or refers to information on a particular item.

Best Practice

Gives advice on the easiest and best way to proceed.

Material Damage

Points out information particular to potential damage of equipment.

1.5 Sources for additional Information

For further details and additional information, please refer to below listed sources:

| Topic | Reference |
|------------------------------------|--|
| Eclipse | http://eclipse.org/ |
| FTDI Driver | www.ftdichip.com |
| Functions | Not all functions are supported by all devices as they are dependent on the device version and the firmware version. For details → separate documents «Firmware Specification» and «Hardware Reference» of the respective positioning controller. |
| Index / Subindex | For detailed descriptions on used objects → separate document «Firmware Specification». |
| IXXAT | www.ixxat.de |
| Kvaser | www.kvaser.com |
| maxon | www.maxongroup.com |
| Microsoft Developer Network (MSDN) | http://msdn.microsoft.com/ |
| National Instruments (NI) | www.ni.com/can |
| Objects | Not all objects are supported by all devices as they are dependent on the device version and the firmware version. For details → separate documents «Firmware Specification» and «Hardware Reference» of the respective positioning controller. |
| Vector | www.vector-informatik.com |

1.6 Trademarks and Brand Names

For easier legibility, registered brand names are listed below and will not be further tagged with their respective trademark. It must be understood that the brands (the below list is not necessarily concluding) are protected by copyright and/or other intellectual property rights even if their legal trademarks are omitted in the later course of this document.

| Brand name | Trademark owner |
|--|---|
| Adobe® Reader® | © Adobe Systems Incorporated, USA-San Jose, CA |
| Borland C++ Builder™ Borland® | © Borland Software Corporation, USA-Rockville MD |
| CANopen® CiA® | © CiA CAN in Automation e.V, DE-Nuremberg |
| Eclipse™ | © Eclipse Foundation, Inc., CDN-Ottawa ON |
| Jetson™ NVIDIA® | © NVIDIA Corporation, USA-Santa Clara CA |
| LabVIEW™ LabWindows™ | © National Instruments Corporation, USA-Austin TX |
| Linux® | © Linus Torvalds (The Linux Foundation, USA-San Francisco CA) |
| NI-CAN™ NI-XNET™ | © National Instruments Corporation, USA-Austin TX |
| Ubuntu | © Canonical Group Limited, UK-London |
| Visual Basic® Visual C#® Visual C++® | © Microsoft Corporation, USA-Redmond WA |
| Windows® | © Microsoft Corporation, USA-Redmond WA |

2 INTRODUCTION

2.1 Documentation Structure

The present document is part of a documentation set. Find below an overview on the documentation hierarchy and the interrelationship of its individual parts:

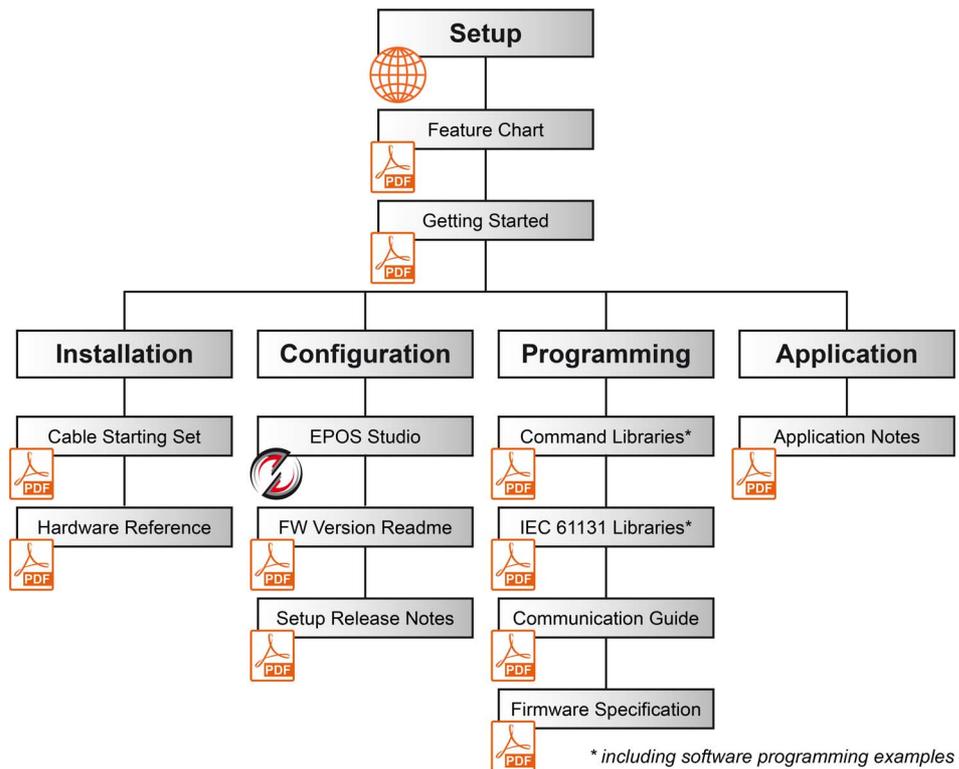

Figure 2-1 EPOS2 documentation structure

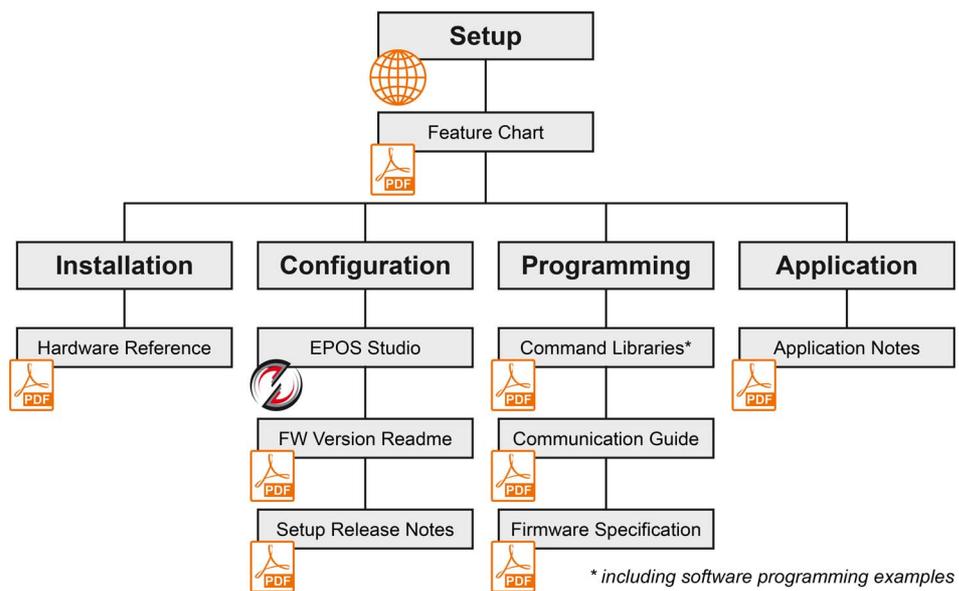

Figure 2-2 EPOS4 documentation structure

2.2 General Information

The «EPOS Command Libraries» are arranged in groups of functions and are intended to assist you in programming the control software based on Microsoft Windows 32-bit and 64-bit as well as Linux operating systems.

The document describes the interfaces between the control software and the libraries. They support maxon's EPOS devices, which are connected to a serial RS232, USB, or CAN interface.

The parameters for 32-bit and 64-bit interfaces are identical. The libraries support the CANopen SDO protocol but are not suitable for real-time communication.

Refer to these chapters for in detail information on library functions and integration into your programming environment:

| | |
|---|-------|
| 3 Initialization Functions | 3-13 |
| 4 Configuration Functions | 4-35 |
| 5 Operation Functions | 5-63 |
| 6 Data Recording Functions | 6-129 |
| 7 Low Layer Functions | 7-141 |
| 9 Supported Operating Systems | 9-149 |

Find the latest edition of the present document, as well as additional documentation and software to the EPOS Positioning Controllers also on the Internet: →www.maxongroup.com

2.3 Products by Third Party Suppliers

For manufacturers' contact information → "Sources for additional Information" on page 1-6.

| Supplier | Products |
|-----------------------------|---|
| IXXAT | IXXAT CANopen interfaces can be operated with the hardware-independent "VCI driver V3" or "VCI driver V4" (Virtual CAN Interface). Check in advanced whether the interface is supported by VCI 3 or VCI 4. |
| Kvaser | Kvaser CAN interfaces are supported. Thereby, respective driver software and hardware must be installed. |
| National Instruments | National Instruments CAN interfaces are supported. Thereby, «NI-XNET» or «NI-CAN» software and hardware must be installed. |
| Vector | For Vector CANopen cards, the "XL-Driver-Library" will be required. The library must be manually installed in the appropriate working directory (or system directory). With this library, you may write your own CANopen applications based on Vector's CAN hardware. |

2.4 Communication Structure

2.4.1 Windows / Linux

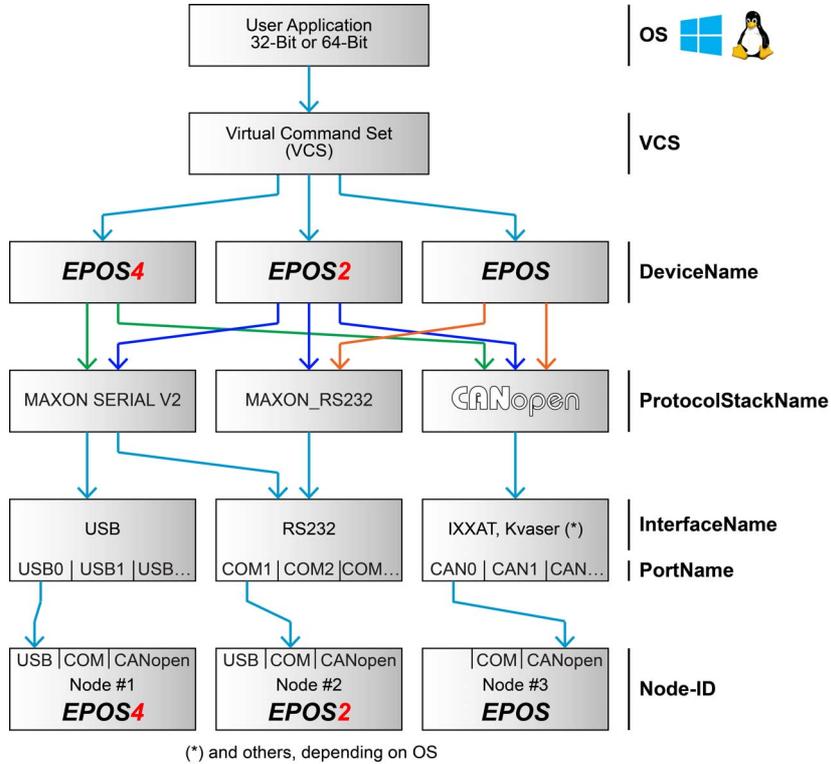

Figure 2-3 Windows / Linux – Communication structure (example)

2.4.2 Gateway

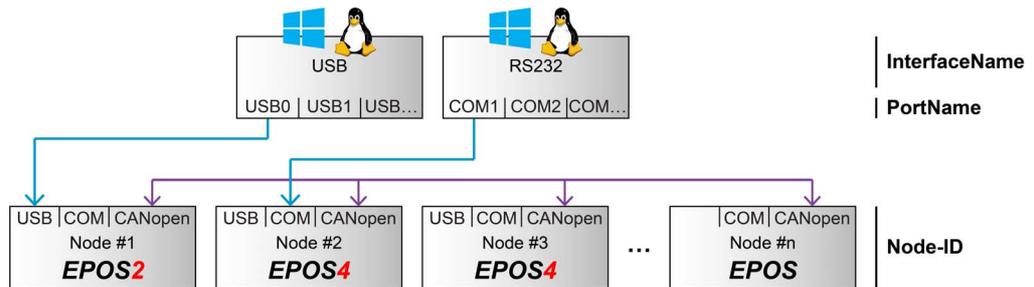

Figure 2-4 Gateway – Communication structure (example)

2.5 Data Type Definitions

| Name | Data type | Size Bits | Size Bytes | Range | Comment |
|--------------|----------------------|-----------|------------|--------------------------------|-------------------------|
| char, __int8 | signed integer | 8 | 1 | -128...127 | |
| BYTE | unsigned integer | 8 | 1 | 0...256 | |
| short | signed integer | 16 | 2 | -32'768...32'767 | |
| WORD | unsigned integer | 16 | 2 | 0...65'535 | |
| long | signed integer | 32 | 4 | -2'147'483'648...2'147'483'647 | Range independent of OS |
| | | 64 | 8 | -2'147'483'648...2'147'483'647 | |
| DWORD | unsigned integer | 32 | 4 | 0...4'294'967'295 | |
| BOOL | signed integer | 32 | 4 | TRUE = 1 FALSE = 0 | |
| HANDLE | pointer to an object | 32 | 4 | 0...4'294'967'295 | Depending on OS |
| | | 64 | 8 | 0...18'446'744'073'709'551'615 | |

Table 2-5 Data type definitions

3 INITIALIZATION FUNCTIONS

Availability of functions

The availability of certain functions depends on the used hardware. For an overview → “Appendix A — Hardware vs. Functions” on page 11-173.

3.1 Communication

3.1.1 VCS_OpenDevice

FUNCTION

HANDLE VCS_OpenDevice(char* DeviceName, char* ProtocolStackName, char* InterfaceName, char* PortName, DWORD* pErrorCode)

DESCRIPTION

VCS_OpenDevice opens the port to send and receive commands. Ports can be RS232, USB, and CANopen interfaces.

For correct designations on DeviceName, ProtocolStackName, InterfaceName, and PortName, use the functions → VCS_GetDeviceNameSelection, → VCS_GetProtocolStackNameSelection, → VCS_GetInterfaceNameSelection, and → VCS_GetPortNameSelection.

For gateway topologies use function → VCS_OpenSubDevice.

PARAMETERS

| | | |
|-------------------|-------|---|
| DeviceName | char* | Name of connected device: <ul style="list-style-type: none"> • EPOS • EPOS2 • EPOS4 (Note: Also used for IDX drives) |
| ProtocolStackName | char* | Name of used communication protocol: <ul style="list-style-type: none"> • MAXON_RS232 • MAXON SERIAL V2 • CANopen |
| InterfaceName | char* | Name of interface: <ul style="list-style-type: none"> • RS232 • USB • IXXAT_<<BoardName>> <<DeviceNumber>> • Kvaser_<<BoardName>> <<DeviceNumber>> • NI_<<BoardName>> <<DeviceNumber>> • Vector_<<BoardName>> <<DeviceNumber>> Remark: Use “VCS_OpenDeviceDlg” or “VCS_GetInterfaceNameSel” to identify the exact name |
| PortName | char* | Name of port: <ul style="list-style-type: none"> • COM1, COM2, ... • USB0, USB1, ... • CAN0, CAN1, ... |

RETURN PARAMETERS

| | | |
|---------------------|--------|---|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | HANDLE | Handle for communication port access. Nonzero if successful; otherwise “0”. |

Continued on next page.

PROGRAMMING EXAMPLE

```
HANDLE keyHandle = 0;
char* deviceName = "EPOS2";
char* protocolStackName = "MAXON_SERIAL_V2";
char* interfaceName = "RS232";
char* portName = "COM1";
DWORD errorCode = 0;

keyHandle = VCS_OpenDevice(deviceName, protocolStackName, interfaceName, portName, &errorCode)
if (keyHandle > 0)
{
    //.....
    VCS_CloseDevice(keyHandle);
}
```

Figure 3-5 VCS_OpenDevice (programming example)

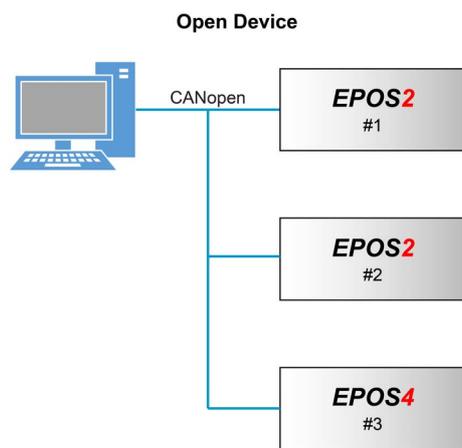

Figure 3-6 VCS_OpenDevice (example)

For gateway topologies use OpenSubDevice (→chapter “3.1.8 VCS_OpenSubDevice” on page 3-19).

3.1.2 VCS_OpenDeviceDlg

FUNCTION

HANDLE VCS_OpenDeviceDlg(DWORD* pErrorCode)

DESCRIPTION

VCS_OpenDeviceDlg recognizes available interfaces capable to operate with EPOS and opens the selected interface for communication. Select “EPOS4” for IDX drives. Not available with Linux.

RETURN PARAMETERS

| | | |
|---------------------|--------|---|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | HANDLE | Handle for communication port access. Nonzero if successful; otherwise “0”. |

3.1.3 VCS_SetProtocolStackSettings

FUNCTION

BOOL VCS_SetProtocolStackSettings(HANDLE KeyHandle, DWORD Baudrate, DWORD Timeout, DWORD* pErrorCode)

DESCRIPTION

VCS_SetProtocolStackSettings writes the communication parameters. For exact values on available baud rates, use function → *VCS_GetBaudRateSelection*.

For correct communication, use the same baud rate as the connected device.

In gateway topologies for subdevice use → *VCS_SetGatewaySettings* instead.

PARAMETERS

| | | |
|-----------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| Baudrate | DWORD | Actual baud rate from opened port [bit/s] |
| Timeout | DWORD | Actual timeout from opened port [ms] |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

PROGRAMMING EXAMPLE

```

HANDLE keyHandle = 0;
char* deviceName = "EPOS2";
char* protocolStackName = "MAXON SERIAL V2";
char* interfaceName = "RS232";
char* portName = "COM1";
DWORD errorCode = 0;

keyHandle = VCS_OpenDevice(deviceName, protocolStackName, interfaceName, portName, &errorCode)
if (keyHandle > 0)
{
    if(VCS_SetProtocolStackSettings(keyHandle, 19200, 500, &errorCode) > 0)
    {
        //.....
    }

    VCS_CloseDevice(keyHandle);
}

```

Figure 3-7 VCS_SetProtocolStackSettings (programming example)

3.1.4 VCS_GetProtocolStackSettings

FUNCTION

BOOL VCS_GetProtocolStackSettings(HANDLE KeyHandle, DWORD* pBaudrate, DWORD* pTimeout, DWORD* pErrorCode)

DESCRIPTION

VCS_GetProtocolStackSettings returns the baud rate and timeout communication parameters.

In gateway topologies for subdevice use → *VCS_GetGatewaySettings* instead.

PARAMETERS

| | | |
|-----------|--------|------------------------|
| KeyHandle | HANDLE | Handle for port access |
|-----------|--------|------------------------|

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pBaudrate | DWORD* | Actual baud rate from opened port [bit/s] |
| pTimeout | DWORD* | Actual timeout from opened port [ms] |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

3.1.5 VCS_FindDeviceCommunicationSettings

FUNCTION

BOOL VCS_FindDeviceCommunicationSettings(HANDLE* pKeyHandle, char* pDeviceName, char* pProtocolStackName, char* pInterfaceName, char* pPortName, WORD SizeName, DWORD* pBaudrate, DWORD* pTimeout, WORD* pNodeID, int DialogMode, DWORD* pErrorCode)

DESCRIPTION

VCS_FindDeviceCommunicationSettings searches the communication setting parameters. Parameters can be defined to accelerate the process. The search will be terminated as the first device is found. Not available with Linux.

PARAMETERS

| | | |
|--------------------|---------|---|
| pKeyHandle | HANDLE* | Handle for port access |
| pDeviceName | char* | Device name |
| pProtocolStackName | char* | Protocol stack name |
| pInterfaceName | char* | Interface name |
| pPortName | char* | Port name |
| SizeName | WORD | Reserved memory size for return parameters |
| DialogMode | int | 0: Show progress dialog 1: Show progress and confirmation dialog 2: Show confirmation dialog 3: Do not show any dialog |

RETURN PARAMETERS

| | | |
|---------------------|---------|--|
| pKeyHandle | HANDLE* | Handle for port access |
| pDeviceName | char* | Device name |
| pProtocolStackName | char* | Protocol stack name |
| pInterfaceName | char* | Interface name |
| pPortName | char* | Port name |
| pBaudrate | DWORD* | Baud rate [bit/s] |
| pTimeout | DWORD* | Timeout [ms] |
| pNodeID | WORD* | Node-ID |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

3.1.6 VCS_CloseAllDevices

FUNCTION

BOOL VCS_CloseAllDevices(DWORD* pErrorCode)

DESCRIPTION

VCS_CloseAllDevices closes all opened ports for devices and subdevices and releases them for other applications. If no opened ports are available, the function returns "0".

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

3.1.7 VCS_CloseDevice

FUNCTION

BOOL VCS_CloseDevice(HANDLE KeyHandle, DWORD* pErrorCode)

DESCRIPTION

VCS_CloseDevice closes the port and releases it for other applications. If no opened ports are available, the function returns "0".

PARAMETERS

| | | |
|-----------|--------|------------------------|
| KeyHandle | HANDLE | Handle for port access |
|-----------|--------|------------------------|

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

3.1.8 VCS_OpenSubDevice

FUNCTION

HANDLE VCS_OpenSubDevice(HANDLE DeviceHandle, char* DeviceName, char* ProtocolStackName, DWORD* pErrorCode)

Description

VCS_OpenSubDevice opens the subdevice connected to the gateway device to send and receive commands.

PARAMETERS

| | | |
|-------------------|--------|--|
| DeviceHandle | HANDLE | Handle from opened device |
| DeviceName | char* | Name of connected subdevice: <ul style="list-style-type: none"> EPOS EPOS2 EPOS4 (Note: Also used for IDX drives) |
| ProtocolStackName | char* | Name of used communication protocol: <ul style="list-style-type: none"> CANopen |

RETURN PARAMETERS

| | | |
|---------------------|--------|---|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | HANDLE | Handle for gateway port access. Nonzero if successful; otherwise "0". |

PROGRAMMING EXAMPLE

```
// device (gateway)
HANDLE keyHandle = 0;
char* deviceName = "EPOS2";
char* protocolStackName = "MAXON SERIAL V2";
char* interfaceName = "RS232";
char* portName = "COM1";

DWORD errorCode = 0;
DWORD baudrate = 0;
DWORD timeout = 0;

// subdevice
HANDLE subkeyHandle = 0;
char* subdeviceName = "EPOS4";
char* subProtocolStackName = "CANopen";

keyHandle = VCS_OpenDevice(deviceName, protocolStackName, interfaceName, portName, &errorCode);

if (keyHandle > 0)
{
    if (VCS_GetProtocolStackSettings(keyHandle, &baudrate, &timeout, &errorCode))
    {
        timeout += 100;
        VCS_SetProtocolStackSettings(keyHandle, baudrate, timeout, &errorCode);
    }

    subkeyHandle = VCS_OpenSubDevice(keyHandle, subdeviceName, subProtocolStackName, &errorCode);

    if (subkeyHandle > 0)
    {
        if (VCS_GetGatewaySettings(keyHandle, &baudrate, &errorCode))
        {
            printf("Gateway baudrate = %u\r\n", baudrate);
        }

        //...application code...

        VCS_CloseSubDevice(subkeyHandle, &errorCode);
    }

    VCS_CloseDevice(keyHandle, &errorCode);
}
}
```

Figure 3-8 VCS_OpenSubDevice (programming example)

Continued on next page.

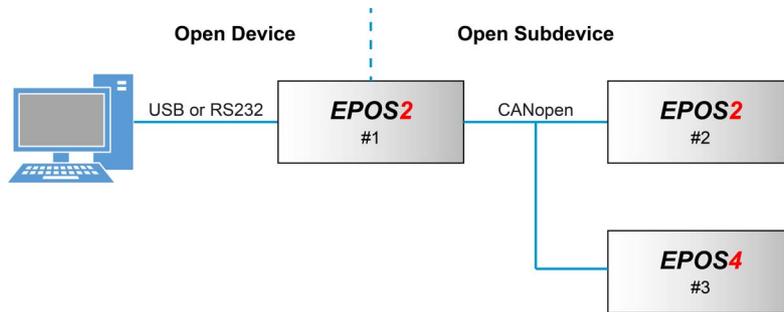

Figure 3-9 VCS_OpenSubDevice (example)

3.1.9 VCS_OpenSubDeviceDlg

FUNCTION

HANDLE VCS_OpenSubDeviceDlg(HANDLE DeviceHandle, DWORD* pErrorCode)

Description

VCS_OpenSubDeviceDlg recognizes available subdevices capable to operate with the gateway device and opens the selected device for communication. Select "EPOS4" for IDX drives. Not available with Linux.

PARAMETERS

| | | |
|--------------|--------|---------------------------|
| DeviceHandle | HANDLE | Handle from opened device |
|--------------|--------|---------------------------|

RETURN PARAMETERS

| | | |
|---------------------|--------|---|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | HANDLE | Handle for gateway port access. Nonzero if successful; otherwise "0". |

3.1.10 VCS_SetGatewaySettings

FUNCTION

BOOL VCS_SetGatewaySettings(HANDLE KeyHandle, DWORD Baudrate, WORD* pErrorCode)

Description

VCS_SetGatewaySettings writes the gateway communication parameters to the device, stores them, and resets the gateway device.

The function does not set the communication parameters to all devices on the bus.

For correct communication, use the same baud rate as the connected devices.

PARAMETERS

| | | |
|-----------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| Baudrate | DWORD | Actual baud rate from opened port [bit/s] |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0". |

3.1.11 VCS_GetGatewaySettings**FUNCTION**

BOOL VCS_GetGatewaySettings(HANDLE KeyHandle, DWORD* pBaudrate, DWORD* pErrorCode)

Description

VCS_GetGatewaySettings returns the baud rate gateway communication parameter.

PARAMETERS

| | | |
|-----------|--------|------------------------|
| KeyHandle | HANDLE | Handle for port access |
|-----------|--------|------------------------|

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pBaudrate | DWORD* | Actual baud rate from opened port [bit/s] |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0". |

3.1.12 VCS_FindSubDeviceCommunicationSettings**FUNCTION**

BOOL VCS_FindSubDeviceCommunicationSettings(HANDLE DeviceHandle, HANDLE* pKeyHandle, char* pDeviceName, char* pProtocolStackName, WORD SizeName, DWORD* pBaudrate, WORD* pNodeId, int DialogMode, DWORD* pErrorCode)

Description

VCS_FindSubDeviceCommunicationSettings searches the subdevice communication setting parameters. The parameters can be defined to accelerate the process. The search will be terminated as the first device is found. Not available with Linux.

PARAMETERS

| | | |
|--------------|--------|---|
| DeviceHandle | HANDLE | Handle from opened device |
| SizeName | WORD | Reserved memory size for return parameters |
| DialogMode | int | 0: Show progress dialog 1: Show progress and confirmation dialog 2: Show confirmation dialog 3: Do not show any dialog |

RETURN PARAMETERS

| | | |
|---------------------|---------|--|
| pKeyHandle | HANDLE* | Handle for port access |
| pDeviceName | char* | Device name |
| pProtocolStackName | char* | ProtocolStack name |
| pBaudrate | DWORD* | Baud rate [bit/s] |
| pNodeId | WORD* | Node-ID |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0". |

3.1.13 VCS_CloseAllSubDevices

FUNCTION

BOOL VCS_CloseAllSubDevices(HANDLE DeviceHandle, DWORD* pErrorCode)

Description

VCS_CloseAllSubDevices closes all opened subdevices and releases them for other applications.

PARAMETERS

| | | |
|--------------|--------|---------------------------|
| DeviceHandle | HANDLE | Handle from opened device |
|--------------|--------|---------------------------|

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0". |

3.1.14 VCS_CloseSubDevice

FUNCTION

BOOL VCS_CloseSubDevice(HANDLE KeyHandle, DWORD* pErrorCode)

Description

VCS_CloseSubDevice closes the subdevice and releases it for other applications.

PARAMETERS

| | | |
|-----------|--------|------------------------|
| KeyHandle | HANDLE | Handle for port access |
|-----------|--------|------------------------|

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0". |

3.2 Info

3.2.1 VCS_GetErrorInfo

FUNCTION

BOOL VCS_GetErrorInfo(DWORD ErrorCodeValue, char* pErrorInfo, WORD MaxStrSize)

DESCRIPTION

VCS_GetErrorInfo returns the error information on the executed function from a received error code. It returns communication and library errors (but not device error descriptions). For error codes → chapter “8 Error Overview” on page 8-145.

PARAMETERS

| | | |
|----------------|-------|-----------------------------|
| ErrorCodeValue | DWORD | Received error code |
| MaxStrSize | WORD | Max. length of error string |

RETURN PARAMETERS

| | | |
|---------------------|-------|--------------------------------------|
| pErrorCode | char* | Error string |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

3.2.2 VCS_GetDriverInfo

FUNCTION

BOOL VCS_GetDriverInfo(char* pLibraryName, WORD MaxStrNameSize, char* pLibraryVersion, WORD MaxStrVersionSize, DWORD* pErrorCode)

DESCRIPTION

VCS_GetDriverInfo returns the name and version from the «EPOS Command Library».

PARAMETERS

| | | |
|-------------------|------|--------------------------------------|
| MaxStrNameSize | WORD | Reserved memory size for the name |
| MaxStrVersionSize | WORD | Reserved memory size for the version |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pLibraryName | char* | Name from the library |
| pLibraryVersion | char* | Version from the library |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

3.2.3 VCS_GetVersion

FUNCTION

BOOL VCS_GetVersion(HANDLE KeyHandle, WORD NodeId, WORD* pHardwareVersion, WORD* pSoftwareVersion, WORD* pApplicationNumber, WORD* pApplicationVersion, DWORD* pErrorCode)

DESCRIPTION

VCS_GetVersion returns the firmware version.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pHardwareVersion | WORD* | Hardware version |
| pSoftwareVersion | WORD* | Software version |
| pApplicationNumber | WORD* | Application number |
| pApplicationVersion | WORD* | Application version |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

3.3 Advanced Functions

3.3.1 VCS_GetDeviceNameSelection

FUNCTION

BOOL VCS_GetDeviceNameSelection(BOOL StartOfSelection, char* pDeviceNameSel, WORD MaxStrSize, BOOL* pEndOfSelection, DWORD* pErrorCode)

DESCRIPTION

VCS_GetDeviceNameSelection returns all available device names.

PARAMETERS

| | | |
|------------------|------|--|
| StartOfSelection | BOOL | TRUE: Get first selection string FALSE: Get next selection string |
| MaxStrSize | WORD | Reserved memory size for the device name |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pDeviceNameSel | char* | Device name |
| pEndOfSelection | BOOL* | TRUE: No more selection string available FALSE: More string available |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

PROGRAMMING EXAMPLE

```

const WORD maxStrSize = 100;
char* deviceNameSel[maxStrSize];
BOOL endOfSelection = FALSE;
DWORD errorCode = 0;

//get first device name
if(VCS_GetDeviceNameSelection(TRUE, deviceNameSel, maxStrSize, &endOfSelection, &errorCode)
{
    //get next device name (as long as endOfSelection == FALSE)
    while(!endOfSelection)
    {
        VCS_GetDeviceNameSelection(FALSE, deviceNameSel, maxStrSize, &endOfSelection, &errorCode);
    }
}

```

Figure 3-10 VCS_GetDeviceNameSelection (programming example)

3.3.2 VCS_GetProtocolStackNameSelection

FUNCTION

BOOL VCS_GetProtocolStackNameSelection(char* DeviceName, BOOL StartOfSelection, char* pProtocolStackNameSel, WORD MaxStrSize, BOOL* pEndOfSelection, DWORD* pErrorCode)

DESCRIPTION

VCS_GetProtocolStackNameSelection returns all available protocol stack names.

PARAMETERS

| | | |
|------------------|-------|--|
| DeviceName | char* | Device name |
| StartOfSelection | BOOL | TRUE: Get first selection string FALSE: Get next selection string |
| MaxStrSize | WORD | Reserved memory size for the name |

RETURN PARAMETERS

| | | |
|-----------------------|--------|--|
| pProtocolStackNameSel | char* | Pointer to available protocol stack name |
| pEndOfSelection | BOOL* | TRUE: No more string available FALSE: More string available |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

PROGRAMMING EXAMPLE

```

const WORD maxStrSize = 100;
char* deviceName = "EPOS2";
char* protocolStackNameSel[maxStrSize];
BOOL endOfSelection = FALSE;
DWORD errorCode = 0;

//get first protocol stack name
if(VCS_GetProtocolStackNameSelection(deviceName,
    TRUE, protocolStackNameSel, maxStrSize, &endOfSelection, &errorCode))
{
    //get next protocol stack name (as long as endOfSelection == FALSE)
    while(!endOfSelection)
    {
        VCS_GetProtocolStackNameSelection(deviceName,
            FALSE, protocolStackNameSel, maxStrSize, &endOfSelection, &errorCode);
    }
}

```

Figure 3-11 VCS_GetProtocolStackNameSelection (programming example)

3.3.3 VCS_GetInterfaceNameSelection

FUNCTION

BOOL VCS_GetInterfaceNameSelection(char* DeviceName, char* ProtocolStackName, BOOL StartOfSelection, char* pInterfaceNameSel, WORD MaxStrSize, BOOL* pEndOfSelection, DWORD* pErrorCode)

DESCRIPTION

VCS_GetInterfaceNameSelection returns all available interface names.

PARAMETERS

| | | |
|-------------------|-------|--|
| DeviceName | char* | Device name |
| ProtocolStackName | char* | Protocol stack name |
| StartOfSelection | BOOL | TRUE: Get first selection string FALSE: Get next selection string |
| MaxStrSize | WORD | Reserved memory size for the interface name |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pInterfaceNameSel | char* | Name of interface |
| pEndOfSelection | BOOL* | TRUE: No more string available FALSE: More string available |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

PROGRAMMING EXAMPLE

```

const WORD maxStrSize = 100;
char* deviceName = "EPOS2";
char* protocolStackName = "MAXON SERIAL V2";
char* interfaceNameSel[maxStrSize];
BOOL endOfSelection = FALSE;
DWORD errorCode = 0;

//get first interface name
if(VCS_GetInterfaceNameSelection(deviceName, protocolStackName,
                                TRUE, interfaceNameSel, maxStrSize, &endOfSelection, &errorCode))
{
    //get next interface name (as long as endOfSelection == FALSE)
    while(!endOfSelection)
    {
        VCS_GetInterfaceNameSelection(deviceName, protocolStackName,
                                      FALSE, interfaceNameSel, maxStrSize, &endOfSelection, &errorCode);
    }
}

```

Figure 3-12 VCS_GetInterfaceNameSelection (programming example)

3.3.4 VCS_GetPortNameSelection

FUNCTION

BOOL VCS_GetPortNameSelection(char* DeviceName, char* ProtocolStackName, char* InterfaceName, BOOL StartOfSelection, char* pPortSel, WORD MaxStrSize, BOOL* pEndOfSelection, DWORD* pErrorCode)

DESCRIPTION

VCS_GetPortNameSelection returns all available port names.

PARAMETERS

| | | |
|-------------------|-------|--|
| DeviceName | char* | Device name |
| ProtocolStackName | char* | Protocol stack name |
| InterfaceName | char* | Interface name |
| StartOfSelection | BOOL | TRUE: Get first selection string FALSE: Get next selection string |
| MaxStrSize | WORD | Reserved memory size for the port name |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pPortSel | char* | Pointer to port name |
| pEndOfSelection | BOOL* | TRUE: No more string available FALSE: More string available |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

PROGRAMMING EXAMPLE

```

const WORD maxStrSize = 100;
char* deviceName = "EPOS2";
char* protocolStackName = "MAXON SERIAL V2";
char* interfaceName = "USB";
char* portSel[maxStrSize];
BOOL endOfSelection = FALSE;
DWORD errorCode = 0;

//get first port name
if(VCS_GetPortNameSelection(deviceName, protocolStackName, interfaceName,
    TRUE, portSel, maxStrSize, &endOfSelection, &errorCode))
{
    //get next port name (as long as endOfSelection == FALSE)
    while(!endOfSelection)
    {
        VCS_GetPortNameSelection(deviceName, protocolStackName, interfaceName,
            FALSE, portSel, maxStrSize, &endOfSelection, &errorCode);
    }
}

```

Figure 3-13 VCS_GetPortNameSelection (programming example)

3.3.5 VCS_ResetPortNameSelection

FUNCTION

BOOL VCS_ResetPortNameSelection(char* DeviceName, char* ProtocolStackName, char* InterfaceName, DWORD* pErrorCode)

DESCRIPTION

VCS_ResetPortNameSelection reinitializes the port enumeration.

PARAMETERS

| | | |
|-------------------|-------|---------------------|
| DeviceName | char* | Device name |
| ProtocolStackName | char* | Protocol stack name |
| InterfaceName | char* | Interface name |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

3.3.6 VCS_GetBaudRateSelection

FUNCTION

BOOL VCS_GetBaudrateSelection(char* DeviceName, char* ProtocolStackName, char* InterfaceName, char* PortName, BOOL StartOfSelection, DWORD* pBaudrateSel, BOOL* pEndOfSelection, DWORD* pErrorCode)

DESCRIPTION

VCS_GetBaudrateSelection returns all available baud rates for the connected port.

PARAMETERS

| | | |
|-------------------|-------|--|
| DeviceName | char* | Device name |
| ProtocolStackName | char* | Protocol stack name |
| InterfaceName | char* | Interface name |
| PortName | char* | Port name |
| StartOfSelection | BOOL | TRUE: Get first selection value FALSE: Get next selection value |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pBaudrateSel | DWORD* | Pointer to baud rate [bit/s] |
| pEndOfSelection | BOOL* | TRUE: No more value available FALSE: More value available |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

PROGRAMMING EXAMPLE

```

char* deviceName = "EPOS4";
char* protocolStackName = "MAXON SERIAL V2";
char* interfaceName = "RS232";
char* portName = "COM1";
DWORD baudrateSel;
BOOL endOfSelection = FALSE;
DWORD errorCode = 0;

//get first baudrate
if(VCS_GetBaudrateSelection(deviceName, protocolStackName, interfaceName, portName,
    TRUE, &baudrateSel, &endOfSelection, &errorCode))
{
    //get next baudrate (as long as endOfSelection == FALSE)
    while(!endOfSelection)
    {
        VCS_GetBaudrateSelection(deviceName, protocolStackName, interfaceName, portName,
            FALSE, &baudrateSel, &endOfSelection, &errorCode);
    }
}

```

Figure 3-14 VCS_GetBaudrateSelection (programming example)

3.3.7 VCS_GetKeyHandle**FUNCTION**

BOOL VCS_GetKeyHandle(char* DeviceName, char* ProtocolStackName, char* InterfaceName, char* PortName, HANDLE* pKeyHandle, DWORD* pErrorCode)

DESCRIPTION

VCS_GetKeyHandle returns the key handle from the opened interface.

PARAMETERS

| | | |
|-------------------|-------|---------------------|
| DeviceName | char* | Device name |
| ProtocolStackName | char* | Protocol stack name |
| InterfaceName | char* | Interface name |
| PortName | char* | Port name |

RETURN PARAMETERS

| | | |
|---------------------|---------|--|
| pKeyHandle | HANDLE* | Handle for port access, if parameters are correct; otherwise 0 |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

3.3.8 VCS_GetDeviceName**FUNCTION**

BOOL VCS_GetDeviceName(HANDLE KeyHandle, char* pDeviceName, WORD MaxStrSize, DWORD* pErrorCode)

DESCRIPTION

VCS_GetDeviceName returns the device name to corresponding handle.

PARAMETERS

| | | |
|------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| MaxStrSize | WORD | Reserved memory size for the device name |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pDeviceName | char* | Device name |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

3.3.9 VCS_GetProtocolStackName

FUNCTION

BOOL VCS_GetProtocolStackName(HANDLE KeyHandle, char* pProtocolStackName, WORD MaxStrSize, DWORD* pErrorCode)

DESCRIPTION

VCS_GetProtocolStackName returns the protocol stack name to corresponding handle.

PARAMETERS

| | | |
|------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| MaxStrSize | WORD | Reserved memory size for the protocol stack name |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pProtocolStackName | char* | Pointer to the protocol stack name |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

3.3.10 VCS_GetInterfaceName

FUNCTION

BOOL VCS_GetInterfaceName(HANDLE KeyHandle, char* pInterfaceName, WORD MaxStrSize, DWORD* pErrorCode)

DESCRIPTION

VCS_GetInterfaceName returns the interface name to corresponding handle.

PARAMETERS

| | | |
|------------|--------|---|
| KeyHandle | char* | Handle for port access |
| MaxStrSize | DWORD* | Reserved memory size for the interface name |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pInterfaceName | char* | Name of interface |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

3.3.11 VCS_GetPortName

FUNCTION

BOOL VCS_GetPortName(HANDLE KeyHandle, char* pPortName, WORD MaxStrSize, DWORD* pErrorCode)

DESCRIPTION

VCS_GetPortName returns the port name to corresponding handle.

PARAMETERS

| | | |
|------------|--------|--|
| KeyHandle | char* | Handle for port access |
| MaxStrSize | DWORD* | Reserved memory size for the port name |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pPortName | char* | Port name |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4 CONFIGURATION FUNCTIONS

For detailed information on the objects → separate document «Firmware Specification».

Availability of functions

The availability of certain functions depends on the used hardware. For an overview → “Appendix A — Hardware vs. Functions” on page 11-173.

4.1 General

4.1.1 VCS_ImportParameter

FUNCTION

BOOL VCS_ImportParameter(HANDLE KeyHandle, WORD NodeId, char* pParameterFileName, BOOL ShowDlg, BOOL ShowMsg, DWORD* pErrorCode)

DESCRIPTION

VCS_ImportParameter writes parameters from a file to the device. Not available with Linux.

PARAMETERS

| | | |
|--------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| pParameterFileName | char* | Full path of parameter file for import |
| ShowDlg | BOOL | Dialog is shown |
| ShowMsg | BOOL | Message box are activated |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

PROGRAMMING EXAMPLE

```
HANDLE keyHandle = 0;
WORD nodeId = 1;
char* parameterFileName = "C:\\Files\\Parameters.dcf";
BOOL showDlg = TRUE;
BOOL showMsg = FALSE;
DWORD errorCode = 0;
BOOL result = FALSE;

//...
result = VCS_ImportParameter(keyHandle, nodeId, parameterFileName, showDlg, showMsg, &errorCode);
//...
```

Figure 4-15 VCS_ImportParameter (programming example)

4.1.2 VCS_ExportParameter

FUNCTION

BOOL VCS_ExportParameter(HANDLE KeyHandle, WORD NodeId, char* pParameterFileName, char* pFirmwareFileName, char* pUserID, char* pComment, BOOL ShowDlg, BOOL ShowMsg, DWORD* pErrorCode)

DESCRIPTION

VCS_ExportParameter reads all device parameters and writes them to the file. Not available with Linux.

PARAMETERS

| | | |
|--------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| pParameterFileName | char* | Full path of parameter file for export |
| pFirmwareFileName | char* | Full path of firmware file of connected device |
| pUserID | char* | User name |
| pComment | char* | Comment |
| ShowDlg | BOOL | Dialog is shown |
| ShowMsg | BOOL | Message box are activated |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

PROGRAMMING EXAMPLE

```

HANDLE keyHandle = 0;
WORD nodeId = 1;
char* parameterFileName = "C:\\Files\\Parameters.dcf";
char* firmwareFileName = "C:\\Files\\Epos_2126h_6220h_0000h_0000h.bin";
char* userId = "Hans Muster";
char* comment = "Parameter Backup";
BOOL showDlg = TRUE;
BOOL showMsg = FALSE;
DWORD errorCode = 0;
BOOL result = FALSE;

//...
result = VCS_ExportParameter(keyHandle, nodeId, parameterFileName, firmwareFileName,
                             userId, comment, showDlg, showMsg, &errorCode);
//...

```

Figure 4-16 VCS_ExportParameter (programming example)

4.1.3 VCS_SetObject

FUNCTION

BOOL VCS_SetObject(HANDLE KeyHandle, WORD NodeId, WORD ObjectIndex, BYTE ObjectSubIndex, void* pData, DWORD NbOfBytesToWrite, DWORD* pNbOfBytesWritten, DWORD* pErrorCode)

DESCRIPTION

VCS_SetObject writes an object value at the given index and subindex.

For information on object index, object subindex, and object length → separate document «Firmware Specification».

PARAMETERS

| | | |
|------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| ObjectIndex | WORD | Object index |
| ObjectSubIndex | BYTE | Object subindex |
| pData | void* | Object data |
| NbOfBytesToWrite | DWORD | Object length to write (number of bytes) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pNbOfBytesWritten | DWORD* | Object length written (number of bytes) |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.1.4 VCS_GetObject

FUNCTION

BOOL VCS_GetObject(HANDLE KeyHandle, WORD NodeId, WORD ObjectIndex, BYTE ObjectSubIndex, void* pData, DWORD NbOfBytesToRead, DWORD* pNbOfBytesRead, DWORD* pErrorCode)

DESCRIPTION

VCS_GetObject reads an object value at the given index and subindex.

For information on object index, object subindex, and object length → separate document «Firmware Specification».

PARAMETERS

| | | |
|-----------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| ObjectIndex | WORD | Object index |
| ObjectSubIndex | BYTE | Object subindex |
| NbOfBytesToRead | DWORD | Object length to read (number of bytes) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pData | void* | Object data |
| pNbOfBytesRead | DWORD* | Object length read (number of bytes) |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.1.5 VCS_Restore

FUNCTION

BOOL VCS_Restore(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_Restore restores all default parameters.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.1.6 VCS_Store

FUNCTION

BOOL VCS_Store(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_Store stores all parameters.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.1.7 VCS_UpdateFirmware

FUNCTION

BOOL VCS_UpdateFirmware (HANDLE KeyHandle, WORD NodeId, char *pBinaryFile, BOOL ShowDlg, BOOL ShowHistory, BOOL ShowMsg, DWORD *pErrorCode)

DESCRIPTION

VCS_UpdateFirmware is used to update the binary code for the controller firmware. Not available with Linux.

PARAMETERS

| | | |
|-------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Identification ID of the addressed device |
| pBinaryFile | char* | Full path of firmware file |
| ShowDlg | BOOL | Progress dialog is shown |
| ShowHistory | BOOL | History list is shown in the progress dialog |
| ShowMsg | BOOL | Message boxes are shown during download (for example if an error occurs) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

PROGRAMMING EXAMPLE

```
HANDLE keyHandle = 0;
WORD nodeId = 1;
char* binaryFileName = "C:\\Files\\Epos_2126h_6220h_0000h_0000h.bin";
BOOL showDlg = TRUE;
BOOL showHistory = TRUE;
BOOL showMsg = FALSE;
DWORD errorCode = 0;
BOOL result = FALSE;

//...
result = VCS_UpdateFirmware(keyHandle, nodeId, binaryFileName,
                             showDlg, showHistory, showMsg, &errorCode);
//...
```

Figure 4-17 VCS_UpdateFirmware (programming example)

4.2 Advanced Functions

4.2.1 Motor

4.2.1.1 VCS_SetMotorType

FUNCTION

BOOL VCS_SetMotorType(HANDLE KeyHandle, WORD NodeId, WORD MotorType, DWORD* pErrorCode)

DESCRIPTION

VCS_SetMotorType writes the motor type.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| MotorType | WORD | Type of motor (→Table 4-6) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

| Description | Value | Name |
|---------------------------|-------|------------------------------|
| brushed DC motor | 1 | MT_DC_MOTOR |
| EC motor sinus commutated | 10 | MT_EC_SINUS_COMMUTATED_MOTOR |
| EC motor block commutated | 11 | MT_EC_BLOCK_COMMUTATED_MOTOR |

Table 4-6 Motor types

4.2.1.2 VCS_SetDcMotorParameter**FUNCTION**

BOOL VCS_SetDcMotorParameter(HANDLE KeyHandle, WORD NodeId, WORD NominalCurrent, WORD MaxOutputCurrent, WORD ThermalTimeConstant, DWORD* pErrorCode)

DESCRIPTION

VCS_SetDcMotorParameter writes all DC motor parameters.

PARAMETERS

| | | |
|---------------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| NominalCurrent | WORD | Maximal continuous current |
| MaxOutputCurrent | WORD | Maximal peak current |
| ThermalTimeConstant | WORD | Thermal time constant winding |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.1.3 VCS_SetEcMotorParameter**FUNCTION**

BOOL VCS_SetEcMotorParameter(HANDLE KeyHandle, WORD NodeId, WORD NominalCurrent, WORD MaxOutputCurrent, WORD ThermalTimeConstant, BYTE NbOfPolePairs, DWORD* pErrorCode)

DESCRIPTION

VCS_SetEcMotorParameter writes all EC motor parameters.

PARAMETERS

| | | |
|---------------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| NominalCurrent | WORD | Maximal continuous current |
| MaxOutputCurrent | WORD | Maximal peak current |
| ThermalTimeConstant | WORD | Thermal time constant winding |
| NbOfPolePairs | BYTE | Number of pole pairs |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.1.4 VCS_GetMotorType

FUNCTION

BOOL VCS_GetMotorType(HANDLE KeyHandle, WORD NodeId, WORD* pMotorType, DWORD* pErrorCode)

DESCRIPTION

VCS_GetMotorType reads the motor type.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pMotorType | WORD* | Type of motor (→ Table 4-6) |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.1.5 VCS_GetDcMotorParameter

FUNCTION

BOOL VCS_GetDcMotorParameter(HANDLE KeyHandle, WORD NodeId, WORD* pNominalCurrent, WORD* pMaxOutputCurrent, WORD* pThermalTimeConstant, DWORD* pErrorCode)

DESCRIPTION

VCS_GetDcMotorParameter reads all DC motor parameters.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|----------------------|--------|--|
| pNominalCurrent | WORD* | Maximal continuous current |
| pMaxOutputCurrent | WORD* | Maximal peak current |
| pThermalTimeConstant | WORD* | Thermal time constant winding |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.1.6 VCS_GetEcMotorParameter

FUNCTION

BOOL VCS_GetEcMotorParameter(HANDLE KeyHandle, WORD NodeId, WORD* pNominalCurrent, WORD* pMaxOutputCurrent, WORD* pThermalTimeConstant, BYTE* pNbOfPolePairs, DWORD* pErrorCode)

DESCRIPTION

VCS_GetEcMotorParameter reads all EC motor parameters.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|----------------------|--------|--|
| pNominalCurrent | WORD* | Maximal continuous current |
| pMaxOutputCurrent | WORD* | Maximal peak current |
| pThermalTimeConstant | WORD* | Thermal time constant winding |
| pNbOfPolePairs | BYTE* | Number of pole pairs |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.2 Sensor

4.2.2.1 VCS_SetSensorType

FUNCTION

BOOL VCS_SetSensorType(HANDLE KeyHandle, WORD NodeId, WORD SensorType, DWORD* pErrorCode)

DESCRIPTION

VCS_SetSensorType writes the sensor type.

PARAMETERS

| | | |
|------------|--------|-----------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| SensorType | WORD | Position Sensor Type (→Table 4-7) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

| Description | Value | Name |
|--|-------|--------------------------------|
| Unknown / No sensor | 0 | ST_UNKNOWN |
| Incremental encoder 1 with index (3-channel) | 1 | ST_INC_ENCODER_3CHANNEL |
| Incremental encoder 1 without index (2-channel) | 2 | ST_INC_ENCODER_2CHANNEL |
| Hall Sensors | 3 | ST_HALL_SENSORS |
| SSI encoder binary coded | 4 | ST_SSI_ABS_ENCODER_BINARY |
| SSI encoder Grey coded | 5 | ST_SSI_ABS_ENCODER_GREY |
| Incremental encoder 2 with index (3-channel) | 6 | ST_INC_ENCODER2_3CHANNEL |
| Incremental encoder 2 without index (2-channel) | 7 | ST_INC_ENCODER2_2CHANNEL |
| Analog incremental encoder with index (3-channel) | 8 | ST_ANALOG_INC_ENCODER_3CHANNEL |
| Analog incremental encoder without index (2-channel) | 9 | ST_ANALOG_INC_ENCODER_2CHANNEL |

Table 4-7 Position sensor types

4.2.2.2 VCS_SetIncEncoderParameter**FUNCTION**

BOOL VCS_SetIncEncoderParameter(HANDLE KeyHandle, WORD NodeId, DWORD EncoderResolution, BOOL InvertedPolarity, DWORD* pErrorCode)

DESCRIPTION

VCS_SetIncEncoderParameter writes the incremental encoder parameters.

PARAMETERS

| | | |
|-------------------|--------|---------------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| EncoderResolution | DWORD | Encoder pulse number [pulse per turn] |
| InvertedPolarity | BOOL | Position sensor polarity |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.2.3 VCS_SetHallSensorParameter**FUNCTION**

BOOL VCS_SetHallSensorParameter(HANDLE KeyHandle, WORD NodeId, BOOL InvertedPolarity, DWORD* pErrorCode)

DESCRIPTION

VCS_SetHallSensorParameter writes the Hall sensor parameter.

PARAMETERS

| | | |
|------------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| InvertedPolarity | BOOL | Position sensor polarity |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.2.4 VCS_SetSsiAbsEncoderParameterEx

FUNCTION

BOOL VCS_SetSsiAbsEncoderParameterEx(HANDLE KeyHandle, WORD NodeId, WORD DataRate, WORD NbOfMultiTurnDataBits, WORD NbOfSingleTurnDataBits, WORD NbOfSpecialDataBits, BOOL InvertedPolarity, WORD Timeout, WORD PowerupTime, DWORD* pErrorCode)

DESCRIPTION

VCS_SetSsiAbsEncoderParameterEx writes all parameters for EPOS4 SSI absolute encoder.

PARAMETERS

| | | |
|------------------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| DataRate | WORD | SSI encoder data rate |
| NbOfMultiTurnDataBits | WORD | Number of bits multi turn |
| NbOfSingleTurnDataBits | WORD | Number of bits single turn |
| NbOfSpecialDataBits | WORD | Number of bits special data |
| InvertedPolarity | BOOL | Position sensor polarity |
| Timeout | WORD | Timeout time |
| PowerupTime | WORD | Power up time |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.2.5 VCS_SetSsiAbsEncoderParameter

FUNCTION

BOOL VCS_SetSsiAbsEncoderParameter(HANDLE KeyHandle, WORD NodeId, WORD DataRate, WORD NbOfMultiTurnDataBits, WORD NbOfSingleTurnDataBits, BOOL InvertedPolarity, DWORD* pErrorCode)

DESCRIPTION

VCS_SetSsiAbsEncoderParameter writes all parameters for SSI absolute encoder.

PARAMETERS

| | | |
|------------------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| DataRate | WORD | SSI encoder data rate |
| NbOfMultiTurnDataBits | WORD | Number of bits multi turn |
| NbOfSingleTurnDataBits | WORD | Number of bits single turn |
| InvertedPolarity | BOOL | Position sensor polarity |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.2.6 VCS_GetSensorType

FUNCTION

BOOL VCS_GetSensorType(HANDLE KeyHandle, WORD NodeId, WORD* pSensorType, DWORD* pErrorCode)

DESCRIPTION

VCS_GetSensorType reads the sensor type.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pSensorType | WORD* | Position sensor type (→ Table 4-7) |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.2.7 VCS_GetIncEncoderParameter

FUNCTION

BOOL VCS_GetIncEncoderParameter(HANDLE KeyHandle, WORD NodeId, DWORD* pEncoderResolution, BOOL* pInvertedPolarity, DWORD* pErrorCode)

DESCRIPTION

VCS_GetIncEncoderParameter reads the incremental encoder parameters.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pEncoderResolution | DWORD* | Encoder pulse number [pulse per turn] |
| pInvertedPolarity | BOOL* | Position sensor polarity |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.2.8 VCS_GetHallSensorParameter

FUNCTION

BOOL VCS_GetHallSensorParameter(HANDLE KeyHandle, WORD NodeId, BOOL* pInvertedPolarity, DWORD* pErrorCode)

DESCRIPTION

VCS_GetHallSensorParameter reads the Hall sensor parameters.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pInvertedPolarity | BOOL* | Position sensor polarity |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.2.9 VCS_GetSsiAbsEncoderParameter**FUNCTION**

BOOL VCS_GetSsiAbsEncoderParameter(HANDLE KeyHandle, WORD NodeId, WORD* pDataRate, WORD* pNbOfMultiTurnDataBits, WORD* pNbOfSingleTurnDataBits, BOOL* pInvertedPolarity, DWORD* pErrorCode)

DESCRIPTION

VCS_GetSsiAbsEncoderParameter reads all parameters from SSI absolute encoder.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|-------------------------|--------|--|
| pDataRate | WORD* | SSI encoder data rate |
| pNbOfMultiTurnDataBits | WORD* | Number of bits multi turn |
| pNbOfSingleTurnDataBits | WORD* | Number of bits single turn |
| pInvertedPolarity | BOOL* | Position sensor polarity |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.2.10 VCS_GetSsiAbsEncoderParameterEx**FUNCTION**

BOOL VCS_GetSsiAbsEncoderParameterEx(HANDLE KeyHandle, WORD NodeId, WORD* pDataRate, WORD* pNbOfMultiTurnDataBits, WORD* pNbOfSingleTurnDataBits, WORD* pNbOfSpecialDataBits, BOOL* pInvertedPolarity, WORD* pTimeout, WORD* pPowerupTime, DWORD* pErrorCode)

DESCRIPTION

VCS_GetSsiAbsEncoderParameterEx reads all parameters from EPOS4 SSI absolute encoder.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|-------------------------|--------|--|
| pDataRate | WORD* | SSI encoder data rate |
| pNbOfMultiTurnDataBits | WORD* | Number of bits multi turn |
| pNbOfSingleTurnDataBits | WORD* | Number of bits single turn |
| pNbOfSpecialDataBits | WORD* | Number of bits special data |
| pInvertedPolarity | BOOL* | Position sensor polarity |
| pTimeout | WORD* | Timeout time |
| pPowerupTime | WORD* | Power up time |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.3 Safety

4.2.3.1 VCS_SetMaxFollowingError

FUNCTION

BOOL VCS_SetMaxFollowingError(HANDLE KeyHandle, WORD NodeId, DWORD MaxFollowingError, DWORD* pErrorCode)

DESCRIPTION

VCS_SetMaxFollowingError writes the maximal allowed following error parameter.

PARAMETERS

| | | |
|-------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| MaxFollowingError | DWORD | Maximal allowed difference of position actual value to position demand value |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.3.2 VCS_GetMaxFollowingError

FUNCTION

BOOL VCS_GetMaxFollowingError(HANDLE KeyHandle, WORD NodeId, DWORD* pMaxFollowingError, DWORD* pErrorCode)

DESCRIPTION

VCS_GetMaxFollowingError reads the maximal allowed following error parameter.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pMaxFollowingError | DWORD* | Maximal allowed difference of position actual value to position demand value |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.3.3 VCS_SetMaxProfileVelocity**FUNCTION**

BOOL VCS_SetMaxProfileVelocity(HANDLE KeyHandle, WORD NodeId, DWORD MaxProfileVelocity, DWORD* pErrorCode)

DESCRIPTION

VCS_SetMaxProfileVelocity writes the maximal allowed velocity. The velocity is interpreted according to the currently configured velocity unit.

PARAMETERS

| | | |
|--------------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| MaxProfileVelocity | DWORD | Used as velocity limit in a position (or velocity) move |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.3.4 VCS_GetMaxProfileVelocity**FUNCTION**

BOOL VCS_GetMaxProfileVelocity(HANDLE KeyHandle, WORD NodeId, DWORD* pMaxProfileVelocity, DWORD* pErrorCode)

DESCRIPTION

VCS_GetMaxProfileVelocity reads the maximal allowed velocity. The velocity is interpreted according to the currently configured velocity unit.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|---|
| pMaxProfileVelocity | DWORD* | Used as velocity limit in a position (or velocity) move |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.3.5 VCS_SetMaxAcceleration

FUNCTION

BOOL VCS_SetMaxAcceleration(HANDLE KeyHandle, WORD NodeId, DWORD MaxAcceleration, DWORD* pErrorCode)

DESCRIPTION

VCS_SetMaxAcceleration writes the maximal allowed acceleration/deceleration.

PARAMETERS

| | | |
|-----------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| MaxAcceleration | DWORD | Limiter of the other acceleration/ deceleration objects |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.3.6 VCS_GetMaxAcceleration

FUNCTION

BOOL VCS_GetMaxAcceleration(HANDLE KeyHandle, WORD NodeId, DWORD* pMaxAcceleration, DWORD* pErrorCode)

DESCRIPTION

VCS_GetMaxAcceleration reads the maximal allowed acceleration/deceleration.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pMaxAcceleration | DWORD* | Limiter of the other acceleration/deceleration objects |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.4 Controller Gain

4.2.4.1 VCS_SetControllerGain

FUNCTION

VCS_SetControllerGain(HANDLE KeyHandle, WORD NodeId, WORD EController, WORD EGain, DWORD64 Value, DWORD* pErrorCode)

DESCRIPTION

VCS_SetControllerGain writes the controller gain.

PARAMETERS

| | | |
|-------------|---------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| EController | WORD | Regulation controller (→ Table 4-8) |
| EGain | WORD | Regulation gain (→ Table 4-9 thru Table 4-13) |
| Value | DWORD64 | Regulation value |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.4.2 VCS_GetControllerGain

FUNCTION

VCS_GetControllerGain(HANDLE KeyHandle, WORD NodeId, WORD EController, WORD EGain, DWORD64* pValue, DWORD* pErrorCode)

DESCRIPTION

VCS_SetControllerGain reads the controller gain.

PARAMETERS

| | | |
|-------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| EController | WORD | Regulation controller (→ Table 4-8) |
| EGain | WORD | Regulation gain (→ Table 4-9 thru Table 4-13) |

RETURN PARAMETERS

| | | |
|---------------------|---------|--|
| pValue | DWORD64 | Regulation value |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

4.2.5 Inputs/Outputs

4.2.5.1 VCS_DigitalInputConfiguration

FUNCTION

BOOL VCS_DigitalInputConfiguration(HANDLE KeyHandle, WORD NodeId, WORD DigitalInputNb, WORD Configuration, BOOL Mask, BOOL Polarity, BOOL ExecutionMask, DWORD* pErrorCode)

DESCRIPTION

VCS_DigitalInputConfiguration sets the parameter for one digital input.

PARAMETERS

| | | |
|----------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| DigitalInputNb | WORD | Number of digital input (object subindex) |
| Configuration | WORD | Configures the functionality assigned to the digital input (bit number) (→ Table 4-14) |
| Mask | BOOL | 1: Functionality state will be displayed 0: not displayed (not supported for EPOS4) |
| Polarity | BOOL | 1: Low active 0: High active |
| ExecutionMask | BOOL | 1: Set the error routine Only for positive and negative switch |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

| Description | Value | Name |
|-----------------------|-------|---------------------------|
| None | 255 | DIC_NO_FUNCTIONALITY |
| General purpose A | 15 | DIC_GENERAL_PURPOSE_A |
| General purpose B | 14 | DIC_GENERAL_PURPOSE_B |
| General purpose C | 13 | DIC_GENERAL_PURPOSE_C |
| General purpose D | 12 | DIC_GENERAL_PURPOSE_D |
| General purpose E | 11 | DIC_GENERAL_PURPOSE_E |
| General purpose F | 10 | DIC_GENERAL_PURPOSE_F |
| General purpose G | 9 | DIC_GENERAL_PURPOSE_G |

| Quick stop | 5 | DIC_QUICK_STOP |
| Device enable | 4 | DIC_DRIVE_ENABLE |
| Position marker | 3 | DIC_POSITION_MARKER |
| Home switch | 2 | DIC_HOME_SWITCH |
| Positive limit switch | 1 | DIC_POSITIVE_LIMIT_SWITCH |
| Negative limit switch | 0 | DIC_NEGATIVE_LIMIT_SWITCH |

Table 4-14 Digital input configuration

4.2.5.2 VCS_DigitalOutputConfiguration

FUNCTION

BOOL VCS_DigitalOutputConfiguration(HANDLE KeyHandle, WORD NodeId, WORD DigitalOutputNb, WORD Configuration, BOOL State, BOOL Mask, BOOL Polarity, DWORD* pErrorCode)

DESCRIPTION

VCS_DigitalOutputConfiguration sets parameter for one digital output.

PARAMETERS

| | | |
|-----------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| DigitalOutputNb | WORD | Number of digital output (object subindex) |
| Configuration | WORD | Configures the functionality assigned to the digital output (bit number) (→ Table 4-15) |
| State | BOOL | State of digital output |
| Mask | BOOL | 1: Functionality state will be set 0: not set (not supported for EPOS4) |
| Polarity | BOOL | 1: Low active 0: High active |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

| Description | Value | Name |
|-------------------|-------|-----------------------|
| None | 255 | DOC_NO_FUNCTIONALITY |
| General purpose A | 15 | DIC_GENERAL_PURPOSE_A |
| General purpose B | 14 | DIC_GENERAL_PURPOSE_B |
| General purpose C | 13 | DIC_GENERAL_PURPOSE_C |
| General purpose D | 12 | DIC_GENERAL_PURPOSE_D |
| General purpose E | 11 | DIC_GENERAL_PURPOSE_E |
| Position compare | 1 | DOC_POSITION_COMPARE |
| Ready / Fault | 0 | DOC_READY_FAULT |

Table 4-15 Digital output configuration

4.2.5.3 VCS_AnalogInputConfiguration

FUNCTION

BOOL VCS_AnalogInputConfiguration(HANDLE KeyHandle, WORD NodeId, WORD AnalogInputNb, WORD Configuration, BOOL ExecutionMask, DWORD* pErrorCode)

DESCRIPTION

VCS_AnalogInputConfiguration sets the configuration parameter for one analog input.

PARAMETERS

| | | |
|---------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| AnalogInputNb | WORD | Number of analog input (object subindex) |
| Configuration | WORD | Configures the functionality assigned to the analog input (bit number) (→ Table 4-16) |
| ExecutionMask | BOOL | 1: Register will be modified |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

| Description | Value | Name |
|--------------------------|-------|------------------------------|
| Analog current setpoint | 0 | AIC_ANALOG_CURRENT_SETPOINT |
| Analog velocity setpoint | 1 | AIC_ANALOG_VELOCITY_SETPOINT |
| Analog position setpoint | 2 | AIC_ANALOG_POSITION_SETPOINT |
| General purpose H | 8 | AIC_GENERAL_PURPOSE_H |
| General purpose G | 9 | AIC_GENERAL_PURPOSE_G |
| General purpose F | 10 | AIC_GENERAL_PURPOSE_F |
| General purpose E | 11 | AIC_GENERAL_PURPOSE_E |
| General purpose D | 12 | AIC_GENERAL_PURPOSE_D |
| General purpose C | 13 | AIC_GENERAL_PURPOSE_C |
| General purpose B | 14 | AIC_GENERAL_PURPOSE_B |
| General purpose A | 15 | AIC_GENERAL_PURPOSE_A |

Table 4-16 Analog input configuration

4.2.5.4 VCS_AnalogOutputConfiguration

FUNCTION

BOOL VCS_AnalogOutputConfiguration(HANDLE KeyHandle, WORD NodeId, WORD AnalogOutputNb, WORD Configuration, DWORD* pErrorCode)

DESCRIPTION

VCS_AnalogOutputConfiguration sets the configuration parameter for one analog output.

PARAMETERS

| | | |
|----------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| AnalogOutputNb | WORD | Number of analog output |
| Configuration | WORD | Configures the functionality assigned to the analog input (→ Table 4-17) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

| Description | Value | Name |
|-------------------|-------|-----------------------|
| General purpose A | 0 | AOC_GENERAL_PURPOSE_A |
| General purpose B | 1 | AOC_GENERAL_PURPOSE_B |

Table 4-17 Analog output configuration

4.2.6 Units

4.2.6.1 VCS_SetVelocityUnits

FUNCTION

BOOL VCS_SetVelocityUnits(HANDLE KeyHandle, WORD NodeId, BYTE VelDimension, char VelNotation, DWORD* pErrorCode)

DESCRIPTION

VCS_SetVelocityUnits writes velocity unit parameters.

PARAMETERS

| | | |
|--------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| VelDimension | BYTE | Velocity dimension index VD_RPM = 0xA4 |
| VelNotation | char | Velocity notation index (→ Table 4-18) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

| Description | Value | Name |
|---------------------------|-------|-------------|
| Standard | 0 | VN_STANDARD |
| Deci (10 ⁻¹) | -1 | VN_DECI |
| Centi (10 ⁻²) | -2 | VN_CENTI |
| Milli (10 ⁻³) | -3 | VN_MILLI |

Table 4-18 Velocity notation index

4.2.6.2 VCS_GetVelocityUnits

FUNCTION

BOOL VCS_GetVelocityUnits(HANDLE KeyHandle, WORD NodeId, BYTE* pVelDimension, char* pVelNotation, DWORD* pErrorCode)

DESCRIPTION

VCS_GetVelocityUnits reads velocity unit parameters.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pVelDimension | BYTE* | Velocity dimension index VD_RPM = 0xA4 |
| pVelNotation | char* | Velocity notation index (→ Table 4-18) |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

••page intentionally left blank••

5 OPERATION FUNCTIONS

Availability of functions

The availability of certain functions depends on the used hardware. For an overview → “Appendix A — Hardware vs. Functions” on page 11-173.

5.1 Operation Mode

5.1.1 VCS_SetOperationMode

FUNCTION

BOOL VCS_SetOperationMode(HANDLE KeyHandle, WORD NodeId, __int8 Mode, DWORD* pErrorCode)

DESCRIPTION

VCS_SetOperationMode sets the operation mode. Modes marked with a triple asterisk (***) are automatically mapped to EPOS4-compatible firmware operation modes as to → Table 5-20.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| Mode | __int8 | Operation mode (→ Table 5-19) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

| Description | Value | Name |
|----------------------------------|-------|--------------------------------|
| Profile Position Mode (PPM) | 1 | OMD_PROFILE_POSITION_MODE |
| Profile Velocity Mode (PVM) | 3 | OMD_PROFILE_VELOCITY_MODE |
| Homing Mode (HM) | 6 | OMD_HOMING_MODE |
| Interpolated Position Mode (IPM) | 7 | OMD_INTERPOLATED_POSITION_MODE |
| Position Mode (PM, CSP)*** | -1 | OMD_POSITION_MODE |
| Velocity Mode (VM, CSV)*** | -2 | OMD_VELOCITY_MODE |
| Current Mode (CM, CST)*** | -3 | OMD_CURRENT_MODE |
| Master Encoder Mode | -5 | OMD_MASTER_ENCODER_MODE |
| Step Direction Mode | -6 | OMD_STEP_DIRECTION_MODE |

Table 5-19 Operation modes

Continued on next page.

| Mapped from | | Mapped to | |
|--------------------|-------|--|-------|
| Name | Value | Name | Value |
| Position Mode (PM) | -1 | Cyclic Synchronous Position Mode (CSP) | 8 |
| Velocity Mode (VM) | -2 | Cyclic Synchronous Velocity Mode (CSV) | 9 |
| Current Mode (CM) | -3 | Cyclic Synchronous Current Mode (CST) | 10 |

Table 5-20 Mapped operation modes

5.1.2 VCS_GetOperationMode

FUNCTION

BOOL VCS_GetOperationMode(HANDLE KeyHandle, WORD NodeId, __int8* pMode, DWORD* pErrorCode)

DESCRIPTION

VCS_GetOperationMode returns the activated operation mode.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|---------|--|
| pMode | __int8* | Operation mode (→ Table 5-19) |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.2 State Machine

For detailed information on the state machine → separate document «Firmware Specification».

5.2.1 VCS_ResetDevice

FUNCTION

BOOL VCS_ResetDevice(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ResetDevice is used to send the NMT service "Reset Node". Command is without acknowledge.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.2.2 VCS_SetState

FUNCTION

BOOL VCS_SetState(HANDLE KeyHandle, WORD NodeId, WORD State, DWORD* pErrorCode)

DESCRIPTION

VCS_SetState reads the actual state machine state.

PARAMETERS

| | | |
|-----------|--------|---------------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| State | WORD | Value of state machine (→ Table 5-21) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

| Description | Value | Name |
|-------------------------|--------|--------------|
| Get/Set Disable State | 0x0000 | ST_DISABLED |
| Get/Set Enable State | 0x0001 | ST_ENABLED |
| Get/Set Quickstop State | 0x0002 | ST_QUICKSTOP |
| Get Fault State | 0x0003 | ST_FAULT |

Table 5-21 State modes

5.2.3 VCS_SetEnableState

FUNCTION

BOOL VCS_SetEnableState(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_SetEnableState changes the device state to “enable”.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.2.4 VCS_SetDisableState

FUNCTION

BOOL VCS_SetDisableState(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_SetDisableState changes the device state to “disable”.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.2.5 VCS_SetQuickStopState

FUNCTION

BOOL VCS_SetQuickStopState(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_SetQuickStopState changes the device state to “quick stop”.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.2.6 VCS_ClearFault

FUNCTION

BOOL VCS_ClearFault(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ClearFault changes the device state from “fault” to “disable”.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.2.7 VCS_GetState

FUNCTION

BOOL VCS_GetState(HANDLE KeyHandle, WORD NodeId, WORD* pState, DWORD* pErrorCode)

DESCRIPTION

VCS_GetState reads the new state of the state machine.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pState | WORD* | Statusword value (→ Table 5-21) |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.2.8 VCS_GetEnableState

FUNCTION

BOOL VCS_GetEnableState(HANDLE KeyHandle, WORD NodeId, BOOL* pIsEnabled, DWORD* pErrorCode)

DESCRIPTION

VCS_GetEnableState checks if the device is enabled.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pIsEnabled | BOOL* | 1: Device enabled 0: Device not enabled |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.2.9 VCS_GetDisableState**FUNCTION**

BOOL VCS_GetDisableState(HANDLE KeyHandle, WORD NodeId, BOOL* plsDisabled, DWORD* pErrorCode)

DESCRIPTION

VCS_GetDisableState checks if the device is disabled.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| plsDisabled | BOOL* | 1: Device disabled 0: Device not disabled |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.2.10 VCS_GetQuickStopState**FUNCTION**

BOOL VCS_GetQuickStopState(HANDLE KeyHandle, WORD NodeId, BOOL* plsQuickStopped, DWORD* pErrorCode)

DESCRIPTION

VCS_GetQuickStopState returns the device state quick stop.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| plsQuickStopped | BOOL* | 1: Device is in quick stop state 0: Device is not in quick stop state |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.2.11 VCS_GetFaultState

FUNCTION

BOOL VCS_GetFaultState(HANDLE KeyHandle, WORD NodeId, BOOL* pIsInFault, DWORD* pErrorCode)

DESCRIPTION

VCS_GetFaultState returns the device state fault. Get error information if the device is in fault state (→“Error Handling” on page 5-71).

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pIsInFault | BOOL* | 1: Device is in fault state 0: Device is not in fault state |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.3 Error Handling

5.3.1 VCS_GetNbOfDeviceError

FUNCTION

BOOL VCS_GetNbOfDeviceError(HANDLE KeyHandle, WORD NodeId, BYTE* pNbDeviceError, DWORD* pErrorCode)

DESCRIPTION

VCS_GetNbOfDeviceError returns the number of actual errors that are recorded.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|----------------|--------|--|
| pNbDeviceError | BYTE* | Number of occurred device errors |
| pErrorCode | DWORD* | Error information on the executed function |

| | | |
|---------------------|------|--------------------------------------|
| Return Value | BOOL | Nonzero if successful; otherwise "0" |
|---------------------|------|--------------------------------------|

PROGRAMMING EXAMPLE

```
HANDLE keyHandle = 0;
WORD nodeId = 1;
DWORD errorCode = 0;
BOOL result = FALSE;

//...
result = VCS_GetNbOfDeviceError(keyHandle, nodeId, &nbOfDeviceError, &errorCode);
//...
```

Figure 5-18 VCS_GetNbOfDeviceError (programming example)

5.3.2 VCS_GetDeviceErrorCode

FUNCTION

BOOL VCS_GetDeviceErrorCode(HANDLE KeyHandle, WORD NodeId, BYTE ErrorNumber, DWORD* pDeviceErrorCode, DWORD* pErrorCode)

DESCRIPTION

VCS_GetDeviceErrorCode returns the error code of the selected error number.

PARAMETERS

| | | |
|-------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| ErrorNumber | BYTE | Number (object subindex) of device error (≥ 1) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pDeviceErrorCode | DWORD* | Actual error code from error history |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

PROGRAMMING EXAMPLE

```

HANDLE keyHandle = 0;
WORD nodeId = 1;
BYTE nbOfDeviceError;
DWORD deviceErrorCode = 0;
DWORD errorCode = 0;

//...
if(VCS_GetNbOfDeviceError(keyHandle, nodeId, &nbOfDeviceError, &errorCode)
{
    for(BYTE errorNumber = 1, errorNumber <= nbOfDeviceError; errorNumber++)
    {
        if(!VCS_GetDeviceErrorCode(keyHandle, nodeId, errorNumber, &deviceErrorCode, &errorCode)
        {
            break;
        }
    }
}
//...

```

Figure 5-19 VCS_GetDeviceErrorCode (programming example)

5.4 Motion Info

5.4.1 VCS_GetMovementState

FUNCTION

BOOL VCS_GetMovementState(HANDLE KeyHandle, WORD NodeId, BOOL* pTargetReached, DWORD* pErrorCode)

DESCRIPTION

VCS_GetMovementState checks if the drive has reached target.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|---|
| pTargetReached | BOOL* | Drive has reached the target. Function reads actual state of bit 10 from the statusword. |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.4.2 VCS_GetPositionIs

FUNCTION

BOOL VCS_GetPositionIs(HANDLE KeyHandle, WORD NodeId, long* pPositionIs, DWORD* pErrorCode)

DESCRIPTION

VCS_GetPositionIs returns the position actual value.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pPositionIs | long* | Position actual value |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.4.3 VCS_GetVelocityIs

FUNCTION

BOOL VCS_GetVelocityIs(HANDLE KeyHandle, WORD NodeId, long* pVelocityIs, DWORD* pErrorCode)

DESCRIPTION

VCS_GetVelocityIs reads the velocity actual value. The velocity is interpreted according to the currently configured velocity unit.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pVelocityIs | long* | Velocity actual value |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.4.4 VCS_GetVelocityIsAveraged

FUNCTION

BOOL VCS_GetVelocityIsAveraged(HANDLE KeyHandle, WORD NodeId, long* pVelocityIsAveraged, DWORD* pErrorCode)

DESCRIPTION

VCS_GetVelocityIsAveraged reads the velocity actual averaged value. The velocity is interpreted according to the currently configured velocity unit.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pVelocityIsAveraged | long* | Velocity actual value averaged |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.4.5 VCS_GetCurrentIs**FUNCTION**

BOOL VCS_GetCurrentIs(HANDLE KeyHandle, WORD NodeId, short* pCurrentIs, DWORD* pErrorCode)

DESCRIPTION

VCS_GetCurrentIs returns the current actual value.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pCurrentIs | short* | Current actual value |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.4.6 VCS_GetCurrentIsAveraged**FUNCTION**

BOOL VCS_GetCurrentIsAveraged(HANDLE KeyHandle, WORD NodeId, short* pCurrentIsAveraged, DWORD* pErrorCode)

DESCRIPTION

VCS_GetCurrentIsAveraged returns the current actual averaged value.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pCurrentIsAveraged | short* | Current actual value averaged |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.4.7 VCS_WaitForTargetReached

FUNCTION

BOOL VCS_WaitForTargetReached(HANDLE KeyHandle, WORD NodeId, DWORD Timeout, DWORD* pErrorCode)

DESCRIPTION

VCS_WaitForTargetReached waits until the state is changed to target reached or until the time is up.

PARAMETERS

| | | |
|-----------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| Timeout | DWORD | Max. wait time [ms] until target reached |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.5 Profile Position Mode (PPM)

5.5.1 VCS_ActivateProfilePositionMode

FUNCTION

BOOL VCS_ActivateProfilePositionMode(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivateProfilePositionMode changes the operational mode to “profile position mode”.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.5.2 VCS_SetPositionProfile

FUNCTION

BOOL VCS_SetPositionProfile(HANDLE KeyHandle, WORD NodeId, DWORD ProfileVelocity, DWORD ProfileAcceleration, DWORD ProfileDeceleration, DWORD* pErrorCode)

DESCRIPTION

VCS_SetPositionProfile sets the position profile parameters.

PARAMETERS

| | | |
|---------------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| ProfileVelocity | DWORD | Position profile velocity. Given in velocity units. |
| ProfileAcceleration | DWORD | Position profile acceleration |
| ProfileDeceleration | DWORD | Position profile deceleration |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.5.3 VCS_GetPositionProfile

FUNCTION

BOOL VCS_GetPositionProfile(HANDLE KeyHandle, WORD NodeId, DWORD* pProfileVelocity, DWORD* pProfileAcceleration, DWORD* pProfileDeceleration, DWORD* pErrorCode)

DESCRIPTION

VCS_GetPositionProfile returns the position profile parameters.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|----------------------|--------|---|
| pProfileVelocity | DWORD* | Position profile velocity. Given in velocity units. |
| pProfileAcceleration | DWORD* | Position profile acceleration |
| pProfileDeceleration | DWORD* | Position profile deceleration |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.5.4 VCS_MoveToPosition

FUNCTION

BOOL VCS_MoveToPosition(HANDLE KeyHandle, WORD NodeId, long TargetPosition, BOOL Absolute, BOOL Immediately, DWORD* pErrorCode)

DESCRIPTION

VCS_MoveToPosition starts movement with position profile to target position.

PARAMETERS

| | | |
|----------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| TargetPosition | long | Target position |
| Absolute | BOOL | TRUE starts an absolute FALSE a relative movement |
| Immediately | BOOL | TRUE starts immediately FALSE waits to end of last positioning |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.5.5 VCS_GetTargetPosition

FUNCTION

BOOL VCS_GetTargetPosition(HANDLE KeyHandle, WORD NodeId, long* pTargetPosition, DWORD* pErrorCode)

DESCRIPTION

VCS_GetTargetPosition returns the profile position mode target value.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pTargetPosition | long* | Target position |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.5.6 VCS_HaltPositionMovement

FUNCTION

BOOL VCS_HaltPositionMovement(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_HaltPositionMovement stops the movement with profile deceleration.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.5.7 Advanced Functions

5.5.7.1 VCS_EnablePositionWindow

FUNCTION

BOOL VCS_EnablePositionWindow(HANDLE KeyHandle, WORD NodeId, DWORD PositionWindow, WORD PositionWindowTime, DWORD* pErrorCode)

DESCRIPTION

VCS_EnablePositionWindow activates the position window.

PARAMETERS

| | | |
|--------------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| PositionWindow | DWORD | Position window value |
| PositionWindowTime | WORD | Position window time value |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.5.7.2 VCS_DisablePositionWindow

FUNCTION

BOOL VCS_DisablePositionWindow(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_DisablePositionWindow deactivates the position window.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.6 Profile Velocity Mode (PVM)

5.6.1 VCS_ActivateProfileVelocityMode

FUNCTION

BOOL VCS_ActivateProfileVelocityMode(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivateProfileVelocityMode changes the operational mode to “profile velocity mode”.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.6.2 VCS_SetVelocityProfile

FUNCTION

BOOL VCS_SetVelocityProfile(HANDLE KeyHandle, WORD NodeId, DWORD ProfileAcceleration, DWORD ProfileDeceleration, DWORD* pErrorCode)

DESCRIPTION

VCS_SetVelocityProfile sets the velocity profile parameters.

PARAMETERS

| | | |
|---------------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| ProfileAcceleration | DWORD | Velocity profile acceleration |
| ProfileDeceleration | DWORD | Velocity profile deceleration |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.6.3 VCS_GetVelocityProfile

FUNCTION

BOOL VCS_GetVelocityProfile(HANDLE KeyHandle, WORD NodeId, DWORD* pProfileAcceleration, DWORD* pProfileDeceleration, DWORD* pErrorCode)

DESCRIPTION

VCS_GetVelocityProfile returns the velocity profile parameters.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|----------------------|--------|--|
| pProfileAcceleration | DWORD* | Velocity profile acceleration |
| pProfileDeceleration | DWORD* | Velocity profile deceleration |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.6.4 VCS_MoveWithVelocity

FUNCTION

BOOL VCS_MoveWithVelocity(HANDLE KeyHandle, WORD NodeId, long TargetVelocity, DWORD* pErrorCode)

DESCRIPTION

VCS_MoveWithVelocity starts the movement with velocity profile to target velocity. The velocity is interpreted according to the currently configured velocity unit.

PARAMETERS

| | | |
|----------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| TargetVelocity | long | Target velocity |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.6.5 VCS_GetTargetVelocity**FUNCTION**

BOOL VCS_GetTargetVelocity(HANDLE KeyHandle, WORD NodeId, long* pTargetVelocity, DWORD* pErrorCode)

DESCRIPTION

VCS_GetTargetVelocity returns the profile velocity mode target value. The velocity is interpreted according to the currently configured velocity unit.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pTargetVelocity | long* | Target velocity |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.6.6 VCS_HaltVelocityMovement**FUNCTION**

BOOL VCS_HaltVelocityMovement(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_HaltVelocityMovement stops the movement with profile deceleration.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.6.7 Advanced Functions

5.6.7.1 VCS_EnableVelocityWindow

FUNCTION

BOOL VCS_EnableVelocityWindow(HANDLE KeyHandle, WORD NodeId, DWORD VelocityWindow, WORD VelocityWindowTime, DWORD* pErrorCode)

DESCRIPTION

VCS_EnableVelocityWindow activates the velocity window.

PARAMETERS

| | | |
|--------------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| VelocityWindow | DWORD | Velocity window value. Given in velocity units. |
| VelocityWindowTime | WORD | Velocity window time value |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.6.7.2 VCS_DisableVelocityWindow

FUNCTION

BOOL VCS_DisableVelocityWindow(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_DisableVelocityWindow deactivates the velocity window.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.7 Homing Mode (HM)

5.7.1 VCS_ActivateHomingMode

FUNCTION

BOOL VCS_ActivateHomingMode(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivateHomingMode changes the operational mode to "homing mode".

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.7.2 VCS_SetHomingParameter

FUNCTION

BOOL VCS_SetHomingParameter(HANDLE KeyHandle, WORD NodeId, DWORD HomingAcceleration, DWORD SpeedSwitch, DWORD SpeedIndex, long HomeOffset, WORD CurrentThreshold, long HomePosition, DWORD* pErrorCode)

DESCRIPTION

VCS_SetHomingParameter writes all homing parameters. The parameter units depend on (position, velocity, acceleration) notation index.

PARAMETERS

| | | |
|--------------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| HomingAcceleration | DWORD | Acceleration for homing profile |
| SpeedSwitch | DWORD | Speed during search for switch |
| SpeedIndex | DWORD | Speed during search for index signal |
| HomeOffset | long | Home offset after homing |
| CurrentThreshold | DWORD | Current threshold for homing methods -1, -2, -3, and -4 |
| HomePosition | long | Used to assign the present position as homing position |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.7.3 VCS_GetHomingParameter

FUNCTION

BOOL VCS_GetHomingParameter(HANDLE KeyHandle, WORD NodeId, DWORD* pHomingAcceleration, DWORD* pSpeedSwitch, DWORD* pSpeedIndex, long* pHomeOffset, WORD* pCurrentThreshold, long* pHomePosition, DWORD* pErrorCode)

DESCRIPTION

VCS_GetHomingParameter reads all homing parameters. The parameter units depend on (position, velocity, acceleration) notation index.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|---|
| pHomingAcceleration | DWORD* | Acceleration for homing profile |
| pSpeedSwitch | DWORD* | Speed during search for switch |
| pSpeedIndex | DWORD* | Speed during search for index signal |
| pHomeOffset | long* | Home offset after homing |
| pCurrentThreshold | DWORD* | Current threshold for homing methods -1, -2, -3, and -4 |
| pHomePosition | long* | Home position value |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.7.4 VCS_FindHome

FUNCTION

BOOL VCS_FindHome(HANDLE KeyHandle, WORD NodeId, __int8 HomingMethod, DWORD* ErrorCode)

DESCRIPTION

VCS_FindHome and HomingMethod permit to find the system home (for example, a home switch).

PARAMETERS

| | | |
|--------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| HomingMethod | __int8 | Homing method (→ Table 5-22) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

HOMING METHODS

| Description | Method | Name |
|--|--------|---|
| Actual Position | 35 | HM_ACTUAL_POSITION |
| Index Positive Speed | 34 | HM_INDEX_POSITIVE_SPEED |
| Index Negative Speed | 33 | HM_INDEX_NEGATIVE_SPEED |
| Home Switch Negative Speed | 27 | HM_HOME_SWITCH_NEGATIVE_SPEED |
| Home Switch Positive Speed | 23 | HM_HOME_SWITCH_POSITIVE_SPEED |
| Positive Limit Switch | 18 | HM_POSITIVE_LIMIT_SWITCH |
| Negative Limit Switch | 17 | HM_NEGATIVE_LIMIT_SWITCH |
| Home Switch Negative Speed & Index | 11 | HM_HOME_SWITCH_NEGATIVE_SPEED_AND_INDEX |
| Home Switch Positive Speed & Index | 7 | HM_HOME_SWITCH_POSITIVE_SPEED_AND_INDEX |
| Positive Limit Switch & Index | 2 | HM_POSITIVE_LIMIT_SWITCH_AND_INDEX |
| Negative Limit Switch & Index | 1 | HM_NEGATIVE_LIMIT_SWITCH_AND_INDEX |
| No homing operation required | 0 | – |
| Current Threshold Positive Speed & Index | -1 | HM_CURRENT_THRESHOLD_NEGATIVE_SPEED_AND_INDEX |
| Current Threshold Negative Speed & Index | -2 | HM_CURRENT_THRESHOLD_NEGATIVE_SPEED_AND_INDEX |
| Current Threshold Positive Speed | -3 | HM_CURRENT_THRESHOLD_POSITIVE_SPEED |
| Current Threshold Negative Speed | -4 | HM_CURRENT_THRESHOLD_NEGATIVE_SPEED |

Table 5-22 Homing methods

5.7.5 VCS_StopHoming

FUNCTION

BOOL VCS_StopHoming(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_StopHoming interrupts homing.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.7.6 VCS_DefinePosition

FUNCTION

BOOL VCS_DefinePosition(HANDLE KeyHandle, WORD NodeId, long HomePosition, DWORD* pErrorCode)

DESCRIPTION

VCS_DefinePosition uses homing method 35 (Actual Position) to set a new home position.

PARAMETERS

| | | |
|--------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| HomePosition | long | Used to assign the present position as homing position |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.7.7 VCS_GetHomingState**FUNCTION**

BOOL VCS_GetHomingState(HANDLE KeyHandle, WORD NodeId, BOOL* pHomingAttained, BOOL* pHomingError, DWORD* pErrorCode)

DESCRIPTION

VCS_GetHomingState returns the states if the homing position is attained and if an homing error has occurred.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pHomingAttained | BOOL* | 0: Homing mode not yet completed 1: Homing mode successfully terminated |
| pHomingError | BOOL* | 0: No homing error 1: Homing error occurred |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.7.8 VCS_WaitForHomingAttained**FUNCTION**

BOOL VCS_WaitForHomingAttained(HANDLE KeyHandle, WORD NodeId, DWORD Timeout, DWORD* pErrorCode)

DESCRIPTION

VCS_WaitForHomingAttained waits until the homing mode is successfully terminated or until the time has elapsed.

PARAMETERS

| | | |
|-----------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| Timeout | DWORD | Max. wait time [ms] until target reached |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.8 Interpolated Position Mode (IPM)

5.8.1 VCS_ActivateInterpolatedPositionMode

FUNCTION

BOOL VCS_ActivateInterpolatedPositionMode(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivateInterpolatedPositionMode changes the operational mode to “interpolated position mode”.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.8.2 VCS_SetIpmBufferParameter

FUNCTION

BOOL VCS_SetIpmBufferParameter(HANDLE KeyHandle, WORD NodeId, WORD UnderflowWarningLimit, WORD OverflowWarningLimit, DWORD* pErrorCode)

DESCRIPTION

VCS_SetIpmBufferParameter sets warning borders of the data input.

PARAMETERS

| | | |
|-----------------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| UnderflowWarningLimit | WORD | Gives lower signalization level of the data input FIFO |
| OverflowWarningLimit | WORD | Gives the higher signalization level of the data input FIFO |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.8.3 VCS_GetIpmBufferParameter**FUNCTION**

BOOL VCS_GetIpmBufferParameter(HANDLE KeyHandle, WORD NodeId, WORD* pUnderflowWarningLimit, WORD* pOverflowWarningLimit, DWORD* pMaxBufferSize, DWORD* pErrorCode)

DESCRIPTION

VCS_GetIpmBufferParameter reads warning borders and the max. buffer size of the data input.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|------------------------|--------|---|
| pUnderflowWarningLimit | WORD* | Gives lower signalization level of the data input FIFO |
| pOverflowWarningLimit | WORD* | Gives the higher signalization level of the data input FIFO |
| pMaxBufferSize | DWORD* | Provides the maximal buffer size |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.8.4 VCS_ClearIpmBuffer**FUNCTION**

BOOL VCS_ClearIpmBuffer(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ClearIpmBuffer clears the input buffer and enables access to the input buffer for drive functions.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.8.5 VCS_GetFreelpmBufferSize

FUNCTION

BOOL VCS_GetFreelpmBufferSize(HANDLE KeyHandle, WORD NodeId, DWORD* pBufferSize, DWORD* pErrorCode)

DESCRIPTION

VCS_GetFreelpmBufferSize reads the available buffer size.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pBufferSize | DWORD* | Actual free buffer size |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.8.6 VCS_AddPvtValueToIpmBuffer

FUNCTION

BOOL VCS_AddPvtValueToIpmBuffer(HANDLE KeyHandle, WORD NodeId, long Position, long Velocity, BYTE Time, DWORD* pErrorCode)

DESCRIPTION

VCS_AddPvtValueToIpmBuffer adds a new PVT reference point to the device.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| Position | long | Position of the reference point |
| Velocity | long | Velocity of the reference point |
| Time | BYTE | Time of the reference point |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.8.7 VCS_StartIpmTrajectory

FUNCTION

BOOL VCS_StartIpmTrajectory(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_StartIpmTrajectory starts the IPM trajectory.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.8.8 VCS_StopIpmTrajectory

FUNCTION

BOOL VCS_StopIpmTrajectory(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_StopIpmTrajectory stops the IPM trajectory.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.8.9 VCS_GetIpmStatus

FUNCTION

BOOL VCS_GetIpmStatus(HANDLE KeyHandle, WORD NodeId, BOOL* pTrajectoryRunning, BOOL* plsUnderflowWarning, BOOL* plsOverflowWarning, BOOL* plsVelocityWarning, BOOL* plsAccelerationWarning, BOOL* plsUnderflowError, BOOL* plsOverflowError, BOOL* plsVelocityError, BOOL* plsAccelerationError, DWORD* pErrorCode)

DESCRIPTION

VCS_GetIpmStatus returns different warning and error states.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|------------------------|--------|--|
| pTrajectoryRunning | BOOL* | State if IPM active |
| plsUnderflowWarning | BOOL* | State if buffer underflow level is reached |
| plsOverflowWarning | BOOL* | State if buffer overflow level is reached |
| plsVelocityWarning | BOOL* | State if IPM velocity greater than profile velocity |
| plsAccelerationWarning | BOOL* | State if IPM acceleration greater than profile acceleration |
| plsUnderflowError | BOOL* | State of underflow error |
| plsOverflowError | BOOL* | State of overflow error |
| plsVelocityError | BOOL* | State if IPM velocity greater than max. profile velocity |
| plsAccelerationError | BOOL* | State if IPM acceleration greater than max. profile acceleration |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.9 Position Mode (PM)

5.9.1 VCS_ActivatePositionMode

FUNCTION

BOOL VCS_ActivatePositionMode(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivatePositionMode changes the operational mode to “position mode”.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.9.2 VCS_SetPositionMust

FUNCTION

BOOL VCS_SetPositionMust(HANDLE KeyHandle, WORD NodeId, long PositionMust, DWORD* pErrorCode)

DESCRIPTION

VCS_SetPositionMust sets the position mode setting value.

PARAMETERS

| | | |
|--------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| PositionMust | long | Position mode setting value |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.9.3 VCS_GetPositionMust

FUNCTION

BOOL VCS_GetPositionMust(HANDLE KeyHandle, WORD NodeId, long* pPositionMust, DWORD* pErrorCode)

DESCRIPTION

VCS_GetPositionMust reads the position mode setting value.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pPositionMust | long* | Position mode setting value |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.9.4 Advanced Functions

5.9.4.1 VCS_ActivateAnalogPositionSetpoint

FUNCTION

BOOL VCS_ActivateAnalogPositionSetpoint(HANDLE KeyHandle, WORD NodeId, WORD AnalogInputNumber, float Scaling, long Offset, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivateAnalogPositionSetpoint configures the selected analog input for analog position setpoint.

PARAMETERS

| | | |
|-------------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| AnalogInputNumber | WORD | Number of the used analog input |
| Scaling | float | Scaling factor for analog position setpoint functionality (for EPOS2, take note of below remarks) |
| Offset | long | Offset for analog position setpoint functionality |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

Remarks for the use with EPOS2:

The scaling value range is limited to -32767...+32767 and is depending on the decimal place accuracy:

- 0 decimal digits: ±32767
- 1 decimal digit: ±3276.7
- 2 decimal digits: ±327.67

Values with more than two decimal digits are rounded to two decimal digits.

5.9.4.2 VCS_DeactivateAnalogPositionSetpoint**FUNCTION**

BOOL VCS_DeactivateAnalogPositionSetpoint(HANDLE KeyHandle, WORD NodeId, WORD AnalogInputNumber, DWORD* pErrorCode)

DESCRIPTION

VCS_DeactivateAnalogPositionSetpoint disables the selected analog input for analog position setpoint.

PARAMETERS

| | | |
|-------------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| AnalogInputNumber | WORD | Number of the used analog input |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.9.4.3 VCS_EnableAnalogPositionSetpoint**FUNCTION**

BOOL VCS_EnableAnalogPositionSetpoint(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_EnableAnalogPositionSetpoint enables the execution mask for analog position setpoint.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.9.4.4 VCS_DisableAnalogPositionSetpoint

FUNCTION

BOOL VCS_DisableAnalogPositionSetpoint(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_DisableAnalogPositionSetpoint disables the execution mask for analog position setpoint.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.10 Velocity Mode (VM)

5.10.1 VCS_ActivateVelocityMode

FUNCTION

BOOL VCS_ActivateVelocityMode(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivateVelocityMode changes the operational mode to “velocity mode”.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.10.2 VCS_SetVelocityMust

FUNCTION

BOOL VCS_SetVelocityMust(HANDLE KeyHandle, WORD NodeId, long VelocityMust, DWORD* pErrorCode)

DESCRIPTION

VCS_SetVelocityMust sets the velocity mode setting value. The velocity is interpreted according to the currently configured velocity unit.

PARAMETERS

| | | |
|--------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| VelocityMust | long | Velocity mode setting value |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.10.3 VCS_GetVelocityMust

FUNCTION

BOOL VCS_GetVelocityMust(HANDLE KeyHandle, WORD NodId, long* pVelocityMust, DWORD* pErrorCode)

DESCRIPTION

VCS_GetVelocityMust returns the velocity mode setting value. The velocity is interpreted according to the currently configured velocity unit.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pVelocityMust | long* | Velocity mode setting value |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.10.4 Advanced Functions

5.10.4.1 VCS_ActivateAnalogVelocitySetpoint

FUNCTION

BOOL VCS_ActivateAnalogVelocitySetpoint(HANDLE KeyHandle, WORD NodId, WORD AnalogInputNumber, float Scaling, long Offset, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivateAnalogVelocitySetpoint configures the selected analog input for analog velocity setpoint.

PARAMETERS

| | | |
|-------------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodId | WORD | Node-ID of the addressed device |
| AnalogInputNumber | WORD | Number of the used analog input |
| Scaling | float | Scaling factor for analog velocity setpoint functionality (for EPOS2, take note of below remarks) |
| Offset | long | Offset for analog velocity setpoint functionality |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

Remarks for the use with EPOS2:

The scaling value range is limited to -32767...+32767 and is depending on the decimal place accuracy:

- 0 decimal digits: ± 32767
- 1 decimal digit: ± 3276.7
- 2 decimal digits: ± 327.67

Values with more than two decimal digits are rounded to two decimal digits.

5.10.4.2 VCS_DeactivateAnalogVelocitySetpoint**FUNCTION**

BOOL VCS_DeactivateAnalogVelocitySetpoint(HANDLE KeyHandle, WORD NodeId, WORD AnalogInputNumber, DWORD* pErrorCode)

DESCRIPTION

VCS_DeactivateAnalogVelocitySetpoint disables the selected analog input for analog velocity setpoint.

PARAMETERS

| | | |
|-------------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| AnalogInputNumber | WORD | Number of the used analog input |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.10.4.3 VCS_EnableAnalogVelocitySetpoint**FUNCTION**

BOOL VCS_EnableAnalogVelocitySetpoint(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_EnableAnalogVelocitySetpoint enables the execution mask for analog velocity setpoint.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.10.4.4 VCS_DisableAnalogVelocitySetpoint

FUNCTION

BOOL VCS_DisableAnalogVelocitySetpoint(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_DisableAnalogVelocitySetpoint disables the execution mask for analog velocity setpoint.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.11 Current Mode (CM)

5.11.1 VCS_ActivateCurrentMode

FUNCTION

BOOL VCS_ActivateCurrentMode(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivateCurrentMode changes the operational mode to “current mode”.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.11.2 VCS_GetCurrentMust

FUNCTION

BOOL VCS_GetCurrentMust(HANDLE KeyHandle, WORD NodeId, short* pCurrentMust, DWORD* pErrorCode)

DESCRIPTION

VCS_GetCurrentMust reads the current mode setting value.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pCurrentMust | short* | Current mode setting value |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.11.3 VCS_SetCurrentMust

FUNCTION

BOOL VCS_SetCurrentMust(HANDLE KeyHandle, WORD NodeId, short CurrentMust, DWORD* pErrorCode)

DESCRIPTION

VCS_SetCurrentMust writes current mode setting value.

PARAMETERS

| | | |
|-------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| CurrentMust | short | Current mode setting value |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.11.4 Advanced Functions

5.11.4.1 VCS_ActivateAnalogCurrentSetpoint

FUNCTION

BOOL VCS_ActivateAnalogCurrentSetpoint(HANDLE KeyHandle, WORD NodeId, WORD AnalogInputNumber, float Scaling, short Offset, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivateAnalogCurrentSetpoint configures the selected analog input for analog current setpoint.

PARAMETERS

| | | |
|-------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| AnalogInputNumber | WORD | Number of the used analog input |
| Scaling | float | Scaling factor for analog current setpoint functionality (for EPOS2, take note of below remarks) |
| Offset | short | Offset for analog current setpoint functionality |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

Remarks for the use with EPOS2:

The scaling value range is limited to -32767...+32767 and is depending on the decimal place accuracy:

- 0 decimal digits: ± 32767
- 1 decimal digit: ± 3276.7
- 2 decimal digits: ± 327.67

Values with more than two decimal digits are rounded to two decimal digits.

5.11.4.2 VCS_DeactivateAnalogCurrentSetpoint**FUNCTION**

BOOL VCS_DeactivateAnalogCurrentSetpoint(HANDLE KeyHandle, WORD NodeId, WORD AnalogInputNumber, DWORD* pErrorCode)

DESCRIPTION

VCS_DeactivateAnalogCurrentSetpoint disables the selected analog input for analog current setpoint.

PARAMETERS

| | | |
|-------------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| AnalogInputNumber | WORD | Number of the used analog input |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.11.4.3 VCS_EnableAnalogCurrentSetpoint**FUNCTION**

BOOL VCS_EnableAnalogCurrentSetpoint(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_EnableAnalogCurrentSetpoint enables the execution mask for analog current setpoint.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.11.4.4 VCS_DisableAnalogCurrentSetpoint

FUNCTION

BOOL VCS_DisableAnalogCurrentSetpoint(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_DisableAnalogCurrentSetpoint disables the execution mask for analog current setpoint.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.12 Master Encoder Mode (MEM)

5.12.1 VCS_ActivateMasterEncoderMode

FUNCTION

BOOL VCS_ActivateMasterEncoderMode(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivateMasterEncoderMode changes the operational mode to “master encoder mode”.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.12.2 VCS_SetMasterEncoderParameter

FUNCTION

BOOL VCS_SetMasterEncoderParameter(HANDLE KeyHandle, WORD NodeId, WORD ScalingNumerator, WORD ScalingDenominator, BYTE Polarity, DWORD MaxVelocity, DWORD MaxAcceleration, DWORD* pErrorCode)

DESCRIPTION

VCS_SetMasterEncoderParameter writes all parameters for master encoder mode.

PARAMETERS

| | | |
|--------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| ScalingNumerator | WORD | Scaling numerator for position calculation |
| ScalingDenominator | WORD | Scaling denominator for position calculation |
| Polarity | BYTE | Polarity of the direction input. 0: Positive 1: Negative |
| MaxVelocity | DWORD | Maximal allowed speed during a profiled move. Given in velocity units. |
| MaxAcceleration | DWORD | Defines the maximal allowed acceleration |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.12.3 VCS_GetMasterEncoderParameter

FUNCTION

BOOL VCS_GetMasterEncoderParameter(HANDLE KeyHandle, WORD NodeId, WORD* pScalingNumerator, WORD* pScalingDenominator, BYTE* pPolarity, DWORD* pMaxVelocity, DWORD* pMaxAcceleration, DWORD* pErrorCode)

DESCRIPTION

VCS_GetMasterEncoderParameter reads all parameters for master encoder mode.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pScalingNumerator | WORD* | Scaling numerator for position calculation |
| pScalingDenominator | WORD* | Scaling denominator for position calculation |
| pPolarity | BYTE* | Polarity of the direction input. 0: Positive 1: Negative |
| pMaxVelocity | DWORD* | Maximal allowed speed during a profiled move. Given in velocity units. |
| pMaxAcceleration | DWORD* | Defines the maximal allowed acceleration |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.13 Step Direction Mode (SDM)

5.13.1 VCS_ActivateStepDirectionMode

FUNCTION

BOOL VCS_ActivateStepDirectionMode(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivateStepDirectionMode changes the operational mode to “step direction mode”.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.13.2 VCS_SetStepDirectionParameter

FUNCTION

BOOL VCS_SetStepDirectionParameter(HANDLE KeyHandle, WORD NodeId, WORD ScalingNumerator, WORD ScalingDenominator, BYTE Polarity, DWORD MaxVelocity, DWORD MaxAcceleration, DWORD* pErrorCode)

DESCRIPTION

VCS_SetStepDirectionParameter writes all parameters for step direction mode.

PARAMETERS

| | | |
|--------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| ScalingNumerator | WORD | Scaling numerator for position calculation |
| ScalingDenominator | WORD | Scaling denominator for position calculation |
| Polarity | BYTE | Polarity of the direction input. 0: Positive 1: Negative |
| MaxVelocity | DWORD | Maximal allowed speed during a profiled move. Given in velocity units. |
| MaxAcceleration | DWORD | Defines the maximal allowed acceleration |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

5.13.3 VCS_GetStepDirectionParameter

FUNCTION

BOOL VCS_GetStepDirectionParameter(HANDLE KeyHandle, WORD NodeId, WORD* pScalingNumerator, WORD* pScalingDenominator, BYTE* pPolarity, DWORD* pMaxVelocity, DWORD* pMaxAcceleration, DWORD* pErrorCode)

DESCRIPTION

VCS_GetStepDirectionParameter reads all parameters for step direction mode.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pScalingNumerator | WORD* | Scaling numerator for position calculation |
| pScalingDenominator | WORD* | Scaling denominator for position calculation |
| pPolarity | BYTE* | Polarity of the direction input. 0: Positive 1: Negative |
| pMaxVelocity | DWORD* | Maximal allowed speed during a profiled move. Given in velocity units. |
| pMaxAcceleration | DWORD* | Defines the maximal allowed acceleration |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14 Inputs & Outputs

For details → separate document «Firmware Specification».

5.14.1 VCS_GetAllDigitalInputs

FUNCTION

BOOL VCS_GetAllDigitalInputs(HANDLE KeyHandle, WORD NodeId, WORD* pInputs, DWORD* pErrorCode)

DESCRIPTION

VCS_GetAllDigitalInputs returns state of all digital inputs.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pInputs | WORD* | Displays the state of the digital input functionalities. Activated if a bit is read as "1". → Figure 5-20 for "tInputs" structure |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

```
typedef struct
{
    WORD    DI_NEGATIVE_LIMIT_SWITCH    : 1;    //Bit0
    WORD    DI_POSITIVE_LIMIT_SWITCH    : 1;    //Bit1
    WORD    DI_HOME_SWITCH              : 1;    //Bit2
    WORD    DI_POSITION_MARKER          : 1;    //Bit3
    WORD    DI_DRIVE_ENABLE             : 1;    //Bit4
    WORD    DI_QUICK_STOP               : 1;    //Bit5
    WORD    DI_TOUCH_PROBE1            : 1;    //Bit6
    WORD    DI_NOT_USED                 : 1;    //Bit7
    WORD    DI_GENERAL_PURPOSE_H        : 1;    //Bit8
    WORD    DI_GENERAL_PURPOSE_G        : 1;    //Bit9
    WORD    DI_GENERAL_PURPOSE_F        : 1;    //Bit10
    WORD    DI_GENERAL_PURPOSE_E        : 1;    //Bit11
    WORD    DI_GENERAL_PURPOSE_D        : 1;    //Bit12
    WORD    DI_GENERAL_PURPOSE_C        : 1;    //Bit13
    WORD    DI_GENERAL_PURPOSE_B        : 1;    //Bit14
    WORD    DI_GENERAL_PURPOSE_A        : 1;    //Bit15
} tInputs;
```

Figure 5-20 VCS_GetAllDigitalInputs (tInputs)

5.14.2 VCS_GetAllDigitalOutputs

FUNCTION

BOOL VCS_GetAllDigitalOutputs(HANDLE KeyHandle, WORD NodeId, WORD* pOutputs, DWORD* pErrorCode)

DESCRIPTION

VCS_GetAllDigitalOutputs returns state of all digital outputs.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|---|
| pOutputs | WORD* | State of all digital outputs. Activated if a bit is read as "1". → Figure 5-21 for "tOutputs" structure |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

```
typedef struct
{
    WORD    DO_READY_FAULT           : 1;    //Bit0
    WORD    DO_POSITION_COMPARE      : 1;    //Bit1
    WORD    DO_HOLDING_BRAKE        : 1;    //Bit2
    WORD    DO_NOT_USED1            : 1;    //Bit3
    WORD    DO_NOT_USED2            : 1;    //Bit4
    WORD    DO_NOT_USED3            : 1;    //Bit5
    WORD    DO_NOT_USED4            : 1;    //Bit6
    WORD    DO_SET_BRAKE             : 1;    //Bit7
    WORD    DO_GENERAL_PURPOSE_H     : 1;    //Bit8
    WORD    DO_GENERAL_PURPOSE_G     : 1;    //Bit9
    WORD    DO_GENERAL_PURPOSE_F     : 1;    //Bit10
    WORD    DO_GENERAL_PURPOSE_E     : 1;    //Bit11
    WORD    DO_GENERAL_PURPOSE_D     : 1;    //Bit12
    WORD    DO_GENERAL_PURPOSE_C     : 1;    //Bit13
    WORD    DO_GENERAL_PURPOSE_B     : 1;    //Bit14
    WORD    DO_GENERAL_PURPOSE_A     : 1;    //Bit15
} tOutputs;
```

Figure 5-21 VCS_GetAllDigitalOutputs (tOutputs)

5.14.3 VCS_SetAllDigitalOutputs

FUNCTION

BOOL VCS_SetAllDigitalOutputs(HANDLE KeyHandle, WORD NodeId, WORD Outputs, DWORD* pErrorCode)

DESCRIPTION

VCS_SetAllDigitalOutputs sets the state of all digital outputs.

PARAMETERS

| | | |
|-----------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| Outputs | WORD | State of all digital outputs. Activated if a bit is written as "1". → Figure 5-22 for "tOutputs" structure |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

```
typedef struct
{
    WORD DO_READY_FAULT           : 1;      //Bit0 (ReadOnly)
    WORD DO_POSITION_COMPARE     : 1;      //Bit1 (ReadOnly)
    WORD DO_HOLDING_BRAKE       : 1;      //Bit2 (ReadOnly)
    WORD DO_NOT_USED1           : 1;
    WORD DO_NOT_USED2           : 1;      //Bit4
    WORD DO_NOT_USED3           : 1;      //Bit5
    WORD DO_NOT_USED4           : 1;      //Bit6
    WORD DO_SET_BRAKE           : 1;      //Bit7
    WORD DO_GENERAL_PURPOSE_H   : 1;      //Bit8
    WORD DO_GENERAL_PURPOSE_G   : 1;      //Bit9
    WORD DO_GENERAL_PURPOSE_F   : 1;      //Bit10
    WORD DO_GENERAL_PURPOSE_E   : 1;      //Bit11
    WORD DO_GENERAL_PURPOSE_D   : 1;      //Bit12
    WORD DO_GENERAL_PURPOSE_C   : 1;      //Bit13
    WORD DO_GENERAL_PURPOSE_B   : 1;      //Bit14
    WORD DO_GENERAL_PURPOSE_A   : 1;      //Bit15
} tOutputs;
```

Figure 5-22 VCS_SetAllDigitalOutputs (tOutputs)

5.14.4 VCS_GetAnalogInput

FUNCTION

BOOL VCS_GetAnalogInput(HANDLE KeyHandle, WORD NodeId, WORD InputNumber, WORD* pAnalogValue, DWORD* pErrorCode)

DESCRIPTION

VCS_GetAnalogInput returns the value from an analog input.

PARAMETERS

| | | |
|-------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| InputNumber | WORD | Analog input number |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pAnalogValue | WORD* | Analog value from input |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.5 VCS_GetAnalogInputVoltage

FUNCTION

BOOL VCS_GetAnalogInputVoltage(HANDLE KeyHandle, WORD NodeId, WORD InputNumber, long* pVoltageValue, DWORD* pErrorCode)

DESCRIPTION

VCS_GetAnalogInputVoltage returns the voltage value from an analog input.

PARAMETERS

| | | |
|-------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| InputNumber | WORD | Analog input number |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pVoltageValue | long* | Analog voltage value from input |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.6 VCS_GetAnalogInputState

FUNCTION

BOOL VCS_GetAnalogInputState(HANDLE KeyHandle, WORD NodeId, WORD Configuration, long* pStateValue, DWORD* pErrorCode)

DESCRIPTION

VCS_GetAnalogInputState returns the state value from an analog input functionality.

PARAMETERS

| | | |
|---------------|--------|-------------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| Configuration | WORD | Analog input function configuration |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pStateValue | long* | Analog state value from input |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

| Description | Value | Name |
|--------------------------|-------|------------------------------|
| Analog current setpoint | 0 | AIC_ANALOG_CURRENT_SETPOINT |
| Analog velocity setpoint | 1 | AIC_ANALOG_VELOCITY_SETPOINT |
| Analog position setpoint | 2 | AIC_ANALOG_POSITION_SETPOINT |
| General purpose H | 8 | AIC_GENERAL_PURPOSE_H |
| General purpose G | 9 | AIC_GENERAL_PURPOSE_G |
| General purpose F | 10 | AIC_GENERAL_PURPOSE_F |
| General purpose E | 11 | AIC_GENERAL_PURPOSE_E |
| General purpose D | 12 | AIC_GENERAL_PURPOSE_D |
| General purpose C | 13 | AIC_GENERAL_PURPOSE_C |
| General purpose B | 14 | AIC_GENERAL_PURPOSE_B |
| General purpose A | 15 | AIC_GENERAL_PURPOSE_A |

Table 5-23 Analog input states

5.14.7 VCS_SetAnalogOutput

FUNCTION

BOOL VCS_SetAnalogOutput(HANDLE KeyHandle, WORD NodeId, WORD OutputNumber, WORD AnalogValue, DWORD* pErrorCode)

DESCRIPTION

VCS_SetAnalogOutput sets the voltage level of an analog output.

PARAMETERS

| | | |
|--------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| OutputNumber | WORD | Analog output number |
| AnalogValue | WORD | Analog value for output |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.8 VCS_SetAnalogOutputVoltage

FUNCTION

BOOL VCS_SetAnalogOutputVoltage(HANDLE KeyHandle, WORD NodeId, WORD OutputNumber, long VoltageValue, DWORD* pErrorCode)

DESCRIPTION

VCS_SetAnalogOutputVoltage sets the voltage level of an analog output.

PARAMETERS

| | | |
|--------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| OutputNumber | WORD | Analog output number |
| VoltageValue | long | Analog voltage value for output |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.9 VCS_SetAnalogOutputState**FUNCTION**

BOOL VCS_SetAnalogOutputState(HANDLE KeyHandle, WORD NodeId, WORD Configuration, long StateValue, DWORD* pErrorCode)

DESCRIPTION

VCS_SetAnalogOutputState sets the state value for an analog output functionality.

PARAMETERS

| | | |
|---------------|--------|--------------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| Configuration | WORD | Analog output function configuration |
| StateValue | long | Analog state value for output |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

| Description | Value | Name |
|-------------------|-------|-----------------------|
| General purpose A | 0 | AOC_GENERAL_PURPOSE_A |
| General purpose B | 1 | AOC_GENERAL_PURPOSE_B |

Table 5-24 Analog output states

5.14.10 Position Compare

5.14.10.1 VCS_SetPositionCompareParameter

FUNCTION

BOOL VCS_SetPositionCompareParameter(HANDLE KeyHandle, WORD NodeId, BYTE OperationalMode, BYTE IntervalMode, BYTE DirectionDependency, WORD IntervalWidth, WORD IntervalRepetitions, WORD PulseWidth, DWORD* pErrorCode)

DESCRIPTION

VCS_SetPositionCompareParameter writes all parameters for position compare.

PARAMETERS

| | | |
|---------------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| OperationalMode | BYTE | Used operational mode in position sequence mode (→ Table 5-25) |
| IntervalMode | BYTE | Used interval mode in position sequence mode (→ Table 5-26) |
| DirectionDependency | BYTE | Used direction dependency in position sequence mode (→ Table 5-27) |
| IntervalWidth | WORD | Holds the width of the position intervals |
| IntervalRepetitions | WORD | Allows to configure the number of position intervals to be considered by position compare |
| PulseWidth | WORD | Configures the pulse width of the trigger output |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

OPERATIONALMODE

| Description | Value | Name |
|------------------------|-------|----------------------------|
| Single position mode | 0 | PCO_SINGLE_POSITION_MODE |
| Position sequence mode | 1 | PCO_POSITION_SEQUENCE_MODE |

Table 5-25 Position compare – Operational modes

Continued on next page.

INTERVALMODE

| Description | Value | Name |
|---|-------|----------------------------|
| Interval positions are set in negative direction relative to the position compare reference position | 0 | PCI_NEGATIVE_DIR_TO_REFPOS |
| Interval positions are set in positive direction relative to the position compare reference position | 1 | PCI_POSITIVE_DIR_TO_REFPOS |
| Interval positions are set in positive and negative direction relative to the position compare reference position | 2 | PCI_BOTH_DIR_TO_REFPOS |

Table 5-26 Position compare – Interval modes

DIRECTIONDEPENDENCY

| Description | Value | Name |
|---|-------|------------------------------|
| Positions are compared only if actual motor direction is negative | 0 | PCD_MOTOR_DIRECTION_NEGATIVE |
| Positions are compared only if actual motor direction is positive | 1 | PCD_MOTOR_DIRECTION_POSITIVE |
| Positions are compared regardless of the actual motor direction | 2 | PCD_MOTOR_DIRECTION_BOTH |

Table 5-27 Position compare – Direction dependency

5.14.10.2 VCS_GetPositionCompareParameter

FUNCTION

BOOL VCS_GetPositionCompareParameter(HANDLE KeyHandle, WORD NodeId, BYTE* pOperationalMode, BYTE* pIntervalMode, BYTE* pDirectionDependency, WORD* pIntervalWidth, WORD* pIntervalRepetitions, WORD* pPulseWidth, DWORD* pErrorCode)

DESCRIPTION

VCS_GetPositionCompareParameter reads all parameters for position compare.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|----------------------|--------|---|
| pOperationalMode | BYTE* | Used operational mode in position sequence mode (→ Table 5-25) |
| pIntervalMode | BYTE* | Used interval mode in position sequence mode (→ Table 5-26) |
| pDirectionDependency | BYTE* | Used direction dependency in position sequence mode (→ Table 5-27) |
| pIntervalWidth | WORD* | Holds the width of the position intervals |
| pIntervalRepetitions | WORD* | Allows to configure the number of position intervals to be considered by position compare |
| pPulseWidth | WORD* | Configures the pulse width of the trigger output |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.10.3 VCS_ActivatePositionCompare**FUNCTION**

BOOL VCS_ActivatePositionCompare(HANDLE KeyHandle, WORD NodeId, WORD DigitalOutputNumber, BOOL Polarity, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivatePositionCompare enables the output to position compare method.

PARAMETERS

| | | |
|---------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| DigitalOutputNumber | WORD | Selected digital output for position compare |
| Polarity | BOOL | Polarity of the selected output |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.10.4 VCS_DeactivatePositionCompare**FUNCTION**

BOOL VCS_DeactivatePositionCompare(HANDLE KeyHandle, WORD NodeId, WORD DigitalOutputNumber, DWORD* pErrorCode)

DESCRIPTION

VCS_DeactivatePositionCompare disables the output to position compare method.

PARAMETERS

| | | |
|---------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| DigitalOutputNumber | WORD | Selected digital output for position compare |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.10.5 VCS_EnablePositionCompare

FUNCTION

BOOL VCS_EnablePositionCompare(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_EnablePositionCompare enables the output mask for position compare method.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
|------------|--------|--|

| | | |
|---------------------|------|--------------------------------------|
| Return Value | BOOL | Nonzero if successful; otherwise "0" |
|---------------------|------|--------------------------------------|

5.14.10.6 VCS_DisablePositionCompare

FUNCTION

BOOL VCS_DisablePositionCompare(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_DisablePositionCompare disables the output mask from position compare method.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
|------------|--------|--|

| | | |
|---------------------|------|--------------------------------------|
| Return Value | BOOL | Nonzero if successful; otherwise "0" |
|---------------------|------|--------------------------------------|

5.14.10.7 VCS_SetPositionCompareReferencePosition

FUNCTION

BOOL VCS_SetPositionCompareReferencePosition(HANDLE KeyHandle, WORD NodeId, long ReferencePosition, DWORD* pErrorCode)

DESCRIPTION

VCS_SetPositionCompareReferencePosition writes the reference position for position compare method.

PARAMETERS

| | | |
|-------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| ReferencePosition | long | Holds the position that is compared with the position actual value |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.11 Position Marker

5.14.11.1 VCS_SetPositionMarkerParameter

FUNCTION

BOOL VCS_SetPositionMarkerParameter(HANDLE KeyHandle, WORD NodeId, BYTE PositionMarkerEdgeType, BYTE PositionMarkerMode, DWORD* pErrorCode)

DESCRIPTION

VCS_SetPositionMarkerParameter writes all parameters for position marker method.

PARAMETERS

| | | |
|------------------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| PositionMarkerEdgeType | BYTE | Defines the type of edge of the position to be captured (→Table 5-28) |
| PositionMarkerMode | BYTE | Defines the position marker capturing mode (→Table 5-29) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

POSITIONMARKEREDGETYPE

| Description | Value | Name |
|--------------|-------|------------------|
| Both edges | 0 | PET_BOTH_EDGES |
| Rising edge | 1 | PET_RISING_EDGE |
| Falling edge | 2 | PET_FALLING_EDGE |

Table 5-28 Position marker edge types

POSITIONMARKERMODE

| Description | Value | Name |
|-------------|-------|---------------|
| Continuous | 0 | PM_CONTINUOUS |
| Single | 1 | PM_SINGLE |
| Multiple | 2 | PM_MULTIPLE |

Table 5-29 Position marker modes

5.14.11.2 VCS_GetPositionMarkerParameter**FUNCTION**

BOOL VCS_GetPositionMarkerParameter(HANDLE KeyHandle, WORD NodeId, BYTE* pPositionMarkerEdgeType, BYTE* pPositionMarkerMode, DWORD* pErrorCode)

DESCRIPTION

VCS_GetPositionMarkerParameter reads all parameters for position marker method.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|-------------------------|--------|---|
| pPositionMarkerEdgeType | BYTE* | Defines the type of edge of the position to be captured (→Table 5-28) |
| pPositionMarkerMode | BYTE* | Defines the position marker capturing mode (→Table 5-29) |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.11.3 VCS_ActivatePositionMarker**FUNCTION**

BOOL VCS_ActivatePositionMarker(HANDLE KeyHandle, WORD NodeId, WORD DigitalInputNumber, BOOL Polarity, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivatePositionMarker enables the digital input to position marker method.

PARAMETERS

| | | |
|--------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| DigitalInputNumber | WORD | Selected digital input for position marker |
| Polarity | BOOL | Polarity of the selected input |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.11.4 VCS_DeactivatePositionMarker

FUNCTION

BOOL VCS_DeactivatePositionMarker(HANDLE KeyHandle, WORD NodeId, WORD DigitalInputNumber, DWORD* pErrorCode)

DESCRIPTION

VCS_DeactivatePositionMarker disables the digital input to position marker method.

PARAMETERS

| | | |
|--------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| DigitalInputNumber | WORD | Selected digital input for position marker |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.11.5 VCS_ReadPositionMarkerCounter

FUNCTION

BOOL VCS_ReadPositionMarkerCounter(HANDLE KeyHandle, WORD NodeId, WORD* pCount, DWORD* pErrorCode)

DESCRIPTION

VCS_ReadPositionMarkerCounter returns the number of the detected edges.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pCount | WORD* | Counts the number of detected edges |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.11.6 VCS_ReadPositionMarkerCapturedPosition**FUNCTION**

BOOL VCS_ReadPositionMarkerCapturedPosition(HANDLE KeyHandle, WORD NodeId, WORD CounterIndex, long* pCapturedPosition, DWORD* pErrorCode)

DESCRIPTION

VCS_ReadPositionMarkerCapturedPosition returns the last captured position or the position from the position marker history.

PARAMETERS

| | | |
|--------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| CounterIndex | WORD | 0: Read position marker captured position |
| | | 1: Read position marker history |
| | | 2: Read position marker history |

RETURN PARAMETERS

| | | |
|---------------------|--------|---|
| pCapturedPosition | long* | Contains the captured position or the position marker history |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

5.14.11.7 VCS_ResetPositionMarkerCounter**FUNCTION**

BOOL VCS_ResetPositionMarkerCounter(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ResetPositionMarkerCounter clears the counter and the captured positions by writing zero to object position marker counter (0x2074-04).

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6 DATA RECORDING FUNCTIONS

Availability of functions

The availability of certain functions depends on the used hardware. For an overview → “Appendix A — Hardware vs. Functions” on page 11-173.
Data recording functions are available for both Windows and Linux. Exemptions are marked accordingly.

6.1 Operation Mode

6.1.1 VCS_SetRecorderParameter

FUNCTION

BOOL VCS_SetRecorderParameter(HANDLE KeyHandle, WORD NodeId, WORD SamplingPeriod, WORD NbOfPrecedingSamples, DWORD* pErrorCode)

DESCRIPTION

VCS_SetRecorderParameter writes parameters for data recorder.

PARAMETERS

| | | |
|----------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| SamplingPeriod | WORD | Sampling period as a multiple of 0.1 ms |
| NbOfPrecedingSamples | WORD | Number of preceding samples (data history) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

6.1.2 VCS_GetRecorderParameter

FUNCTION

BOOL VCS_GetRecorderParameter(HANDLE KeyHandle, WORD NodeId, WORD* pSamplingPeriod, WORD* pNbOfPrecedingSamples, DWORD* pErrorCode)

DESCRIPTION

VCS_GetRecorderParameter reads parameters for data recorder.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|-----------------------|--------|--|
| pSamplingPeriod | WORD* | Sampling period as a multiple of 0.1 ms |
| pNbOfPrecedingSamples | WORD* | Number of preceding samples (data history) |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.1.3 VCS_EnableTrigger

FUNCTION

BOOL VCS_EnableTrigger(HANDLE KeyHandle, WORD NodeId, BYTE TriggerType, DWORD* pErrorCode)

DESCRIPTION

VCS_EnableTrigger connects the trigger(s) for data recording.

PARAMETERS

| | | |
|-------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| TriggerType | BYTE | Configuration of Auto Trigger functions. Activated if a bit is written as "1" (→ Table 6-30). Activation of more than one trigger at the same time is possible. |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

| Description | Value | Name |
|------------------------|-------|---------------------------|
| Trigger movement start | 1 | DR_MOVEMENT_START_TRIGGER |
| Error trigger | 2 | DR_ERROR_TRIGGER |
| Digital input trigger | 4 | DR_DIGITAL_INPUT_TRIGGER |
| Trigger movement end | 8 | DR_MOVEMENT_END_TRIGGER |

Table 6-30 Data recorder trigger types

6.1.4 VCS_DisableAllTriggers**FUNCTION**

BOOL VCS_DisableAllTriggers(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_DisableAllTriggers sets data recorder configuration for triggers to zero.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.1.5 VCS_ActivateChannel**FUNCTION**

BOOL VCS_ActivateChannel(HANDLE KeyHandle, WORD NodeId, BYTE ChannelNumber, WORD ObjectIndex, BYTE ObjectSubIndex, BYTE ObjectSize, DWORD* pErrorCode)

DESCRIPTION

VCS_ActivateChannel connects object for data recording.

Start with channel 1 (one)! Then, for every activated channel, the number of sampling variables will be incremented.

PARAMETERS

| | | |
|----------------|--------|---|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| ChannelNumber | BYTE | Channel number [1...4] |
| ObjectIndex | WORD | Object index for data recording |
| ObjectSubIndex | BYTE | Object subindex for data recording |
| ObjectSize | BYTE | Object size in bytes for data recording |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.1.6 VCS_DeactivateAllChannels

FUNCTION

BOOL VCS_DeactivateAllChannels(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_DeactivateAllChannels zeros all data recording objects.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.2 Data Recorder Status

6.2.1 VCS_StartRecorder

FUNCTION

BOOL VCS_StartRecorder(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_StartRecorder starts data recording.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.2.2 VCS_StopRecorder

FUNCTION

BOOL VCS_StopRecorder(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_StopRecorder stops data recording.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.2.3 VCS_ForceTrigger

FUNCTION

BOOL VCS_ForceTrigger(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ForceTrigger forces the data recording triggers.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.2.4 VCS_IsRecorderRunning

FUNCTION

BOOL VCS_IsRecorderRunning(HANDLE KeyHandle, WORD NodeId, BOOL* pRunning, DWORD* pErrorCode)

DESCRIPTION

VCS_IsRecorderRunning returns the data recorder status "running".

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pRunning | BOOL | 1: Data recorder running 0: Data recorder stopped |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.2.5 VCS_IsRecorderTriggered

FUNCTION

BOOL VCS_IsRecorderTriggered(HANDLE KeyHandle, WORD NodeId, BOOL* pTriggered, DWORD* pErrorCode)

DESCRIPTION

VCS_IsRecorderTriggered returns data recorder status "triggered".

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pTriggered | BOOL* | 1: Data recorder triggered 0: Data recorder not triggered |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.3 Data Recorder Data

6.3.1 VCS_ReadChannelVectorSize

FUNCTION

BOOL VCS_ReadChannelVectorSize(HANDLE KeyHandle, WORD NodeId, DWORD* pVectorSize, DWORD* pErrorCode)

DESCRIPTION

VCS_ReadChannelVectorSize returns the maximal number of samples per variable. It is dynamically calculated by the data recorder.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pVectorSize | DWORD* | Maximal number of samples per variable |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.3.2 VCS_ReadChannelDataVector

FUNCTION

BOOL VCS_ReadChannelDataVector(HANDLE KeyHandle, WORD NodeId, BYTE ChannelNumber, BYTE* pDataVector, DWORD VectorSize, DWORD* pErrorCode)

DESCRIPTION

VCS_ReadChannelDataVector returns the data points of a selected channel.

PARAMETERS

| | | |
|------------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| ChannelNumber | BYTE | Selected channel |
| VectorBufferSize | DWORD | Size of data points |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pDataVectorBuffer | BYTE* | Data points of selected channel |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.3.3 VCS_ShowChannelDataDlg**FUNCTION**

BOOL VCS_ShowChannelDataDlg(HANDLE KeyHandle, WORD NodeId, DWORD* pErrorCode)

DESCRIPTION

VCS_ShowChannelDataDlg opens the dialog to show the data channel(s). Not available with Linux.

PARAMETERS

| | | |
|-----------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.3.4 VCS_ExportChannelDataToFile**FUNCTION**

BOOL VCS_ExportChannelDataToFile(HANDLE KeyHandle, WORD NodeId, char* FileName, DWORD* pErrorCode)

DESCRIPTION

VCS_ExportChannelDataToFile saves the data point in a file. Not available with Linux.

PARAMETERS

| | | |
|-----------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| FileName | char* | Path and file name to save data points (*.csv,*.txt,*.rda) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.4 Advanced Functions

6.4.1 VCS_ReadDataBuffer

FUNCTION

BOOL VCS_ReadDataBuffer(HANDLE KeyHandle, WORD NodeId, BYTE* pDataBuffer, DWORD BufferSizeToRead, DWORD* pBufferSizeRead, WORD* pVectorStartOffset, WORD* pMaxNbOfSamples, WORD* pNbOfRecordedSamples, DWORD* pErrorCode)

DESCRIPTION

VCS_ReadDataBuffer returns the buffer data points.

PARAMETERS

| | | |
|------------------|--------|---------------------------------|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| BufferSizeToRead | DWORD | Buffer size |

RETURN PARAMETERS

| | | |
|----------------------|--------|--|
| pDataBuffer | BYTE* | Data points |
| pBufferSizeRead | DWORD* | Size of read data buffer |
| pVectorStartOffset | WORD* | Offset to the start of the recorded data vector within the ring buffer |
| pMaxNbOfSamples | WORD* | Maximal number of samples per variable |
| pNbOfRecordedSamples | WORD* | Number of recorded samples |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

6.4.2 VCS_ExtractChannelDataVector**FUNCTION**

BOOL VCS_ExtractChannelDataVector(HANDLE KeyHandle, WORD NodeId, BYTE ChannelNumber, BYTE* pDataBuffer, DWORD BufferSize, BYTE* pDataVector, DWORD VectorSize, WORD VectorStartOffset, WORD MaxNbOfSamples, WORD NbOfRecordedSamples, DWORD* pErrorCode)

DESCRIPTION

VCS_ExtractChannelDataVector returns the vector of a data channel.

PARAMETERS

| | | |
|---------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | Node-ID of the addressed device |
| ChannelNumber | BYTE | Selected channel |
| pDataBuffer | BYTE* | Data points |
| BufferSize | DWORD | Buffer size |
| VectorSize | DWORD | Vector size |
| VectorStartOffset | WORD | Offset to the start of the recorded data vector within the ring buffer |
| MaxNbOfSamples | WORD | Maximal number of samples per variable |
| NbOfRecordedSamples | WORD | Number of recorded samples |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pDataVector | BYTE* | Data points of the channel |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

7 LOW LAYER FUNCTIONS

Availability of functions

The availability of certain functions depends on the used hardware. For an overview → “Appendix A — Hardware vs. Functions” on page 11-173.

7.1 CAN Layer

7.1.1 VCS_SendCANFrame

FUNCTION

BOOL VCS_SendCANFrame(HANDLE KeyHandle, WORD CobID, WORD Length, void* pData, DWORD* pErrorCode)

DESCRIPTION

VCS_SendCANFrame sends a general CAN frame to the CAN bus.

PARAMETERS

| | | |
|-----------|--------|-----------------------------|
| KeyHandle | HANDLE | Handle for port access |
| CobID | WORD | CAN frame 11-bit identifier |
| Length | WORD | CAN frame data length |
| pData | void* | CAN frame data |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise “0” |

7.1.2 VCS_ReadCANFrame

FUNCTION

BOOL VCS_ReadCANFrame(HANDLE KeyHandle, WORD CobID, WORD Length, void* pData, DWORD Timeout, DWORD* p ErrorCode)

DESCRIPTION

VCS_ReadCANFrame reads a general CAN frame from the CAN bus.

PARAMETERS

| | | |
|-----------|--------|-----------------------------|
| KeyHandle | HANDLE | Handle for port access |
| CobID | WORD | CAN frame 11-bit identifier |
| Length | WORD | CAN frame data length |
| Timeout | WORD | Maximum waiting period |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pData | void* | CAN frame data |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

7.1.3 VCS_RequestCANFrame

FUNCTION

BOOL VCS_RequestCANFrame(HANDLE KeyHandle, WORD CobID, WORD Length, void* pData, DWORD* pErrorCode)

DESCRIPTION

VCS_RequestCANFrame requests a general CAN frame from the CAN bus using Remote Transmit Request (RTR).

PARAMETERS

| | | |
|-----------|--------|-----------------------------|
| KeyHandle | HANDLE | Handle for port access |
| CobID | WORD | CAN frame 11-bit identifier |
| Length | WORD | CAN frame data length |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pData | void* | CAN frame data |
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

7.1.4 VCS_SendNMTService

FUNCTION

BOOL VCS_SendNMTService(HANDLE KeyHandle, WORD NodeId, WORD CommandSpecifier, DWORD* pErrorCode)

DESCRIPTION

VCS_SendNMTService is used to send a NMT protocol from a master to one slave/all slaves in a network. Command is without acknowledge.

PARAMETERS

| | | |
|------------------|--------|--|
| KeyHandle | HANDLE | Handle for port access |
| NodeId | WORD | 1...127: NMT slave with given Node-ID 0: All NMT slaves |
| CommandSpecifier | WORD | NMT service (→ Table 7-31) |

RETURN PARAMETERS

| | | |
|---------------------|--------|--|
| pErrorCode | DWORD* | Error information on the executed function |
| Return Value | BOOL | Nonzero if successful; otherwise "0" |

| Description | Value | Name |
|-----------------------|-------|---------------------------|
| Start remote node | 1 | NCS_START_REMOTE_NODE |
| Stop remote node | 2 | NCS_STOP_REMOTE_NODE |
| Enter pre-operational | 128 | NCS_ENTER_PRE_OPERATIONAL |
| Reset node | 129 | NCS_RESET_NODE |
| Reset communication | 130 | NCS_RESET_COMMUNICATION |

Table 7-31 Command specifier

••page intentionally left blank••

8 ERROR OVERVIEW

8.1 Communication Errors

| Abort code | Name | Error cause |
|-------------|--|---|
| 0x0000 0000 | No error | Communication was successful |
| 0x0503 0000 | Toggle error | Toggle bit not alternated |
| 0x0504 0000 | SDO timeout | SDO protocol timed out |
| 0x0504 0001 | Client/server specifier error | Client/server command specifier not valid or unknown |
| 0x0504 0002 | Invalid block size | Invalid block size (block mode only) |
| 0x0504 0003 | Invalid sequence | Invalid sequence number (block mode only) |
| 0x0504 0004 | CRC error | CRC error (block mode only) |
| 0x0504 0005 | Out of memory error | Out of memory |
| 0x0601 0000 | Access error | Unsupported access to an object (e.g. write command to a read-only object) |
| 0x0601 0001 | Write only | Read command to a write only object |
| 0x0601 0002 | Read only | Write command to a read only object |
| 0x0602 0000 | Object does not exist | Last read or write command had a wrong object index or subindex |
| 0x0604 0041 | PDO mapping error | Object cannot be mapped to PDO |
| 0x0604 0042 | PDO length error | Number and length of objects to be mapped would exceed PDO length |
| 0x0604 0043 | General parameter error | General parameter incompatibility |
| 0x0604 0047 | General internal Incompatibility error | General internal incompatibility in device |
| 0x0606 0000 | Hardware error | Access failed due to a hardware error |
| 0x0607 0010 | Service parameter error | Data type does not match, length or service parameter does not match |
| 0x0607 0012 | Service parameter too high | Data type does not match, length or service parameter too high |
| 0x0607 0013 | Service Parameter too low | Data type does not match, length or service parameter too low |
| 0x0609 0011 | Object subindex error | Last read or write command had a wrong subindex |
| 0x0609 0030 | Value range error | Value range of parameter exceeded |
| 0x0609 0031 | Value too high | Value of parameter written too high |
| 0x0609 0032 | Value too low | Value of parameter written too low |
| 0x0609 0036 | Maximum less minimum error | Maximum value is less than minimum value |
| 0x0800 0000 | General error | General error |
| 0x0800 0020 | Transfer or store error | Data cannot be transferred or stored |
| 0x0800 0021 | Local control error | Data cannot be transferred or stored to application because of local control |
| 0x0800 0022 | Wrong device state | Data cannot be transferred or stored to application because of present device state |
| 0x0F00 FFB9 | CAN ID error | Wrong CAN ID |
| 0x0F00 FFBC | Service mode error | Device is not in service mode |
| 0x0F00 FFBE | Password error | Password is wrong |
| 0x0F00 FFBF | Illegal command | RS232 command is illegal (does not exist) |
| 0x0F00 FFC0 | Wrong NMT state | Device is in wrong NMT state |

Table 8-32 Communication errors

8.2 Library Errors

8.2.1 General Errors

| Abort code | Name | Error cause |
|-------------|------------------------------------|--|
| 0x0000 0000 | No error | Communication was successful |
| 0x1000 0001 | Internal error | Internal error |
| 0x1000 0002 | Null pointer | Null pointer passed to function |
| 0x1000 0003 | Handle not valid | Handle passed to function is not valid |
| 0x1000 0004 | Bad virtual device name | Virtual device name is not valid |
| 0x1000 0005 | Bad device name | Device name is not valid |
| 0x1000 0006 | Bad protocol stack name | Protocol stack name is not valid |
| 0x1000 0007 | Bad interface name | Interface name is not valid |
| 0x1000 0008 | Bad port name | Port is not valid |
| 0x1000 0009 | Library not loaded | Could not load external library |
| 0x1000 000A | Command failed | Error while executing command |
| 0x1000 000B | Timeout | Timeout occurred during execution |
| 0x1000 000C | Bad parameter | Bad parameter passed to function |
| 0x1000 000D | Command aborted by user | Command was aborted by user |
| 0x1000 000E | Buffer too small | Buffer is too small |
| 0x1000 000F | No communication found | No communication settings found |
| 0x1000 0010 | Function not supported | Function is not supported |
| 0x1000 0011 | Parameter already used | Parameter is already in use |
| 0x1000 0013 | Bad device handle | Bad device handle |
| 0x1000 0014 | Bad protocol stack handle | Bad protocol stack handle |
| 0x1000 0015 | Bad interface handle | Bad interface handle |
| 0x1000 0016 | Bad port handle | Bad port handle |
| 0x1000 0017 | Address parameters are not correct | Address parameters are not correct |
| 0x1000 0020 | Bad device state | Bad device state |
| 0x1000 0021 | Bad file content | Bad file content |
| 0x1000 0022 | Path does not exist | System cannot find specified path |
| 0x1000 0024 | Cross thread error | (.NET only) Open device and close device called from different threads |
| 0x1000 0026 | Gateway support error | Gateway is not supported |
| 0x1000 0027 | Serial number update error | Serial number update failed |
| 0x1000 0028 | Communication interface error | Communication interface is not supported |
| 0x1000 0029 | Firmware support error | Firmware version does not support functionality |
| 0x1000 002A | Firmware file hardware error | Firmware file does not match hardware version |
| 0x1000 002B | Firmware file error | Firmware file does not match or is corrupt |
| 0x1000 002C | Parameter access denied | Parameter access denied |
| 0x1000 002D | Data recorder not configured | Data recorder not configured |
| 0x1000 002E | File format not supported | File format not supported |
| 0x1000 002F | Failed saving data | Failed saving data |

Table 8-33 General errors

8.2.2 Interface Layer Errors

| Abort code | Name | Error cause |
|-------------|---------------------------------|---------------------------------------|
| 0x2000 0001 | Opening interface error | Error while opening interface |
| 0x2000 0002 | Closing Interface error | Error while closing interface |
| 0x2000 0003 | Interface is not open | Interface is not open |
| 0x2000 0004 | Opening port error | Error while opening port |
| 0x2000 0005 | Closing port error | Error while closing port |
| 0x2000 0006 | Port is not open | Port is not open |
| 0x2000 0007 | Resetting port error | Error while resetting port |
| 0x2000 0008 | Configuring port settings error | Error while configuring port settings |
| 0x2000 0009 | Configuring port mode error | Error while configuring port mode |

Table 8-34 Interface layer errors

8.2.2.1 Interface Layer “RS232” Errors

| Abort code | Name | Error cause |
|-------------|------------------------|--------------------------------|
| 0x2100 0001 | RS232 write data error | Error while writing RS232 data |
| 0x2100 0002 | RS232 read data error | Error while reading RS232 data |

Table 8-35 Interface layer “RS232” errors

8.2.2.2 Interface Layer “CAN” Errors

| Abort code | Name | Error cause |
|-------------|--------------------------|------------------------------------|
| 0x2200 0001 | CAN receive frame error | Error while receiving CAN frame |
| 0x2200 0002 | CAN transmit frame error | Error while transmitting CAN frame |

Table 8-36 Interface layer “CAN” errors

8.2.2.3 Interface Layer “USB” Errors

| Abort code | Name | Error cause |
|-------------|----------------------|--------------------------|
| 0x2300 0001 | USB write data error | Error while writing data |
| 0x2300 0002 | USB read data error | Error while reading data |

Table 8-37 Interface layer “USB” errors

8.2.2.4 Interface Layer “HID” Errors

| Abort code | Name | Error cause |
|-------------|----------------------|--|
| 0x2400 0001 | HID write data error | Error while writing USB data to HID device |
| 0x2400 0002 | HID read data error | Error while reading USB data from HID device |

Table 8-38 Interface layer “HID” errors

8.2.3 Protocol Layer Errors

8.2.3.1 Protocol Layer “MAXON_RS232” Errors

| Abort code | Name | Error cause |
|-------------|-------------------------------|-------------------------------|
| 0x3100 0001 | Negative acknowledge received | Negative acknowledge received |
| 0x3100 0002 | Bad CRC received | Bad checksum received |
| 0x3100 0003 | Bad data received | Bad data size received |

Table 8-39 Protocol layer “MAXON_RS232” errors

8.2.3.2 Protocol Layer “CANopen” Errors

| Abort code | Name | Error cause |
|-------------|----------------------------------|--|
| 0x3200 0001 | SDO response not received | CAN frame of SDO protocol not received |
| 0x3200 0002 | Requested CAN frame not received | Requested CAN frame not received |
| 0x3200 0003 | CAN frame not received | CAN frame not received |

Table 8-40 Protocol layer “CANopen” errors

8.2.3.3 Protocol Layer “Maxon Serial V2” Errors

| Abort code | Name | Error cause |
|-------------|--------------------------------|-------------------------------------|
| 0x3400 0001 | Stuffing error | Failure while stuffing data |
| 0x3400 0002 | Destuffing error | Failure while destuffing data |
| 0x3400 0003 | Bad CRC received | Bad CRC received |
| 0x3400 0004 | Bad data size received | Bad data size received |
| 0x3400 0005 | Bad data size written | Bad data size written |
| 0x3400 0006 | Serial data frame not written | Failure occurred while writing data |
| 0x3400 0007 | Serial data frame not received | Failure occurred while reading data |

Table 8-41 Protocol layer “Maxon Serial V2” errors

8.2.3.4 Device Layer Errors

| Abort code | Name | Error cause |
|-------------|------------------------------------|---|
| 0x5100 0001 | Bad data size received | Object data size does not correspond to requested data size |
| 0x5100 0007 | Sensor configuration not supported | Sensor configuration cannot be written to controller |
| 0x5100 0008 | Sensor configuration unknown | Sensor configuration read from controller is not supported by library |
| 0x5100 0009 | Configuration not supported | Configuration is not supported |
| 0x5100 000A | Digital input mask not supported | Digital input mask is not supported |

Table 8-42 Device layer errors

9 SUPPORTED OPERATING SYSTEMS

Consider this chapter as a “How To” on the integration of the library into your programming environment.

The «EPOS Command Library» is an implementation of protocols to communicate between an EPOS Positioning Controller and a PC running a Windows or Linux 32-bit or 64-bit operating system. All EPOS commands (including generating/sending/receiving data frames) are implemented and they can be called directly from your own program.

Use the library as an easy and simple way to develop your own application. Do not bother about protocol details; the only thing you need to ensure are the correct communication port settings.

The chapter splits into descriptions for Windows (→as of page 9-149) and Linux (→as of page 9-163) operating systems and comprises the following sections:

- a) Overview
- b) Integration and programming environment-specific information on how to incorporate the library
- c) Programming and a programming environment-specific example on how to configure and establish communication

9.1 Windows

9.1.1 Overview

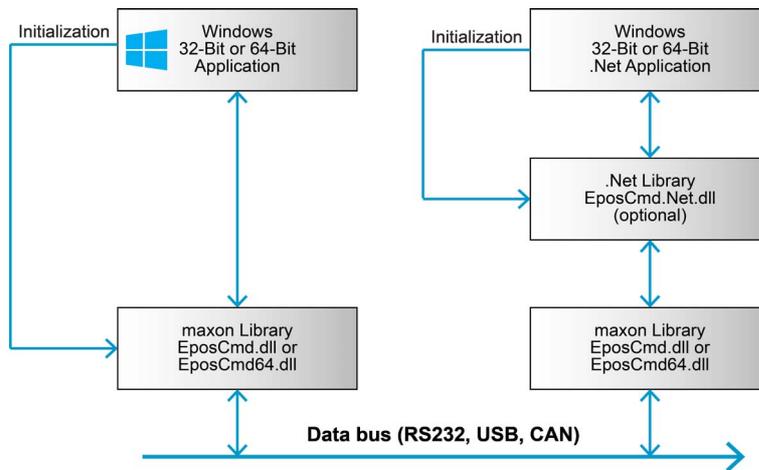

Figure 9-23 Windows – Library hierarchy

Continued on next page.

The Windows library supports communication interfaces and system architectures as shown in the following table:

| Interface | | Architecture | |
|-----------|--------|--------------|-----|
| | | x86 | x64 |
| RS232 | | X | X |
| USB | | X | X |
| CAN | IXXAT | X | X |
| | Kvaser | X | X |
| | NI | X | X |
| | Vector | X | X |

Table 9-43 Supported platforms, architectures, and interfaces

9.1.1.1 Tested CAN Interfaces and Drivers

The following CAN adapters and driver versions were successfully tested:

IXXAT

- IXXAT USB-to-CAN V2 Professional
- IXXAT USB-to-CAN V2 Compact

Kvaser

- PCI canx II HS/HS
- Kvaser Leaf Light HS
- Kvaser Leaf Light v2

NI

- NI PCI-8512 CAN/HS
- NI PCI CAN, 2 Port

Vector

- Vector VN1610 CAN Interface
- Vector VN1611 CAN Interface

Other CAN adapters

Other CAN adapters might work with the library as well but have not been tested.

9.1.2 Integration into Programming Environment

The way to include the library functions in your own windows program depends on the compiler and the programming language you are using. Subsequently described are the procedures based on the most commonly used programming languages.

To include the library and to establish communication, proceed as follows:

- 1) Copy the library **EposCmd.dll** (for Windows 32-bit) or **EposCmd64.dll** for Windows 64-bit) to your working directory.
- 2) Use the function **VCS_OpenDevice** to configure the library if the settings are known. You also may use the dialog **VCS_OpenDeviceDlg** to open a port.
- 3) Use the function **VCS_SetProtocolStackSettings** to select baud rate and timeout.
- 4) Close all opened ports at the end of your program.
- 5) For detailed information on the initialization procedure → chapter “9.1.3 Programming” on page 9-160.

9.1.2.1 Borland C++ Builder

You will need to integrate the following files:

- **Definitions.h** – Constant definitions and declarations of library functions
- **EposCmd.dll** – Dynamic link library
- **EposCmd.lib** – Import library (OMF format)

Proceed as follows:

- 1) Copy the files to the working directory of your project.
- 2) Include the file “Definition.h” to your program code using the instruction “#include Definitions.h”.
- 3) Add the file “EposCmd.lib” to the project using menu “Project\Add to project”. Select the file and click “Open”.

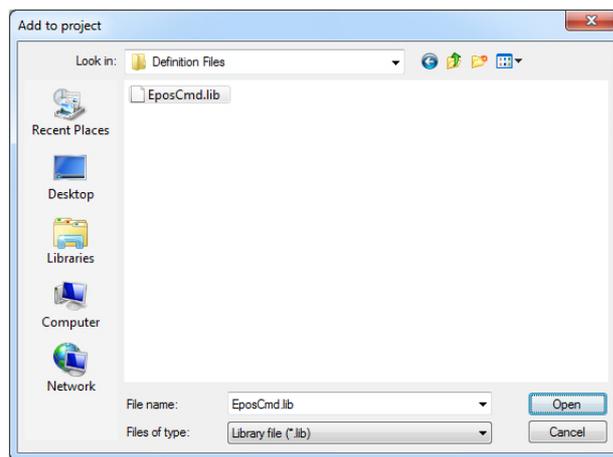

Figure 9-24 Borland C++Builder – Adding library

- 4) Now, you can execute all library functions in your own code.

Best Practice

Use the calling convention `__stdcall`. It will manage how the parameters are put on the stack and how the stack will be cleaned once executed.

9.1.2.2 Borland Delphi

You will need to integrate the following files:

- **Definitions.pas** – Constant definitions and declarations of library functions
- **EposCmd.dll** – Dynamic link library

Proceed as follows:

- 1) Copy the files to the working directory of your project.
- 2) Write the instruction “Definitions” into the uses clause of your program header.
- 3) Now, you can execute all library functions in your own code.

9.1.2.3 Microsoft Visual Basic

Remark

The «EPOS Command Library» was developed in programming language Microsoft Visual C++. Take note that data types in Microsoft Visual Basic and Microsoft Visual C++ differ. For more details consult the MSDN library, Visual Basic Concepts, →«Converting C Declarations to Visual Basic».

You will need to integrate the following files:

32-bit

- **Definitions.vb** – Constant definitions and declarations of library functions
- **EposCmd.dll** – Dynamic link library

64-bit

- **Definitions.vb** – Constant definitions and declarations of library functions
- **EposCmd64.dll** – Dynamic link library

Proceed as follows:

- 1) Copy the files to the working directory of your project.
- 2) Add the file “Definitions.vb” to the project using the project tree in “Solution Explorer”. Click right on «Add», select «Existing Item», select the file, and click «Add».

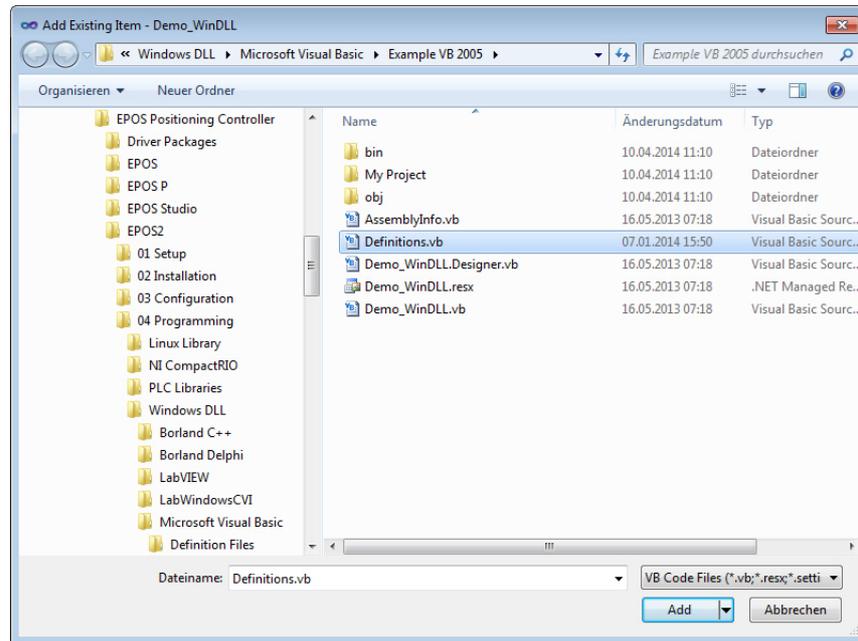

Figure 9-25 Visual Basic – Adding modules

- 3) Choose one of the two ways:
 - a) Copy the file "EposCmd.dll" (for Windows 32-bit) or "EposCmd64.dll" for Windows 64-bit) into the release directory.
 - b) Open menu "Properties", switch to the "Compile" tab and type "." into the "Build output path" edit line.

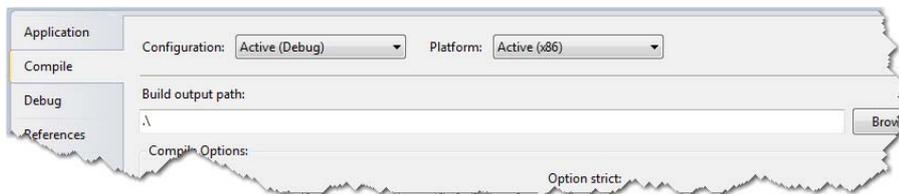

Figure 9-26 Visual Basic – Output path

- 4) Now, you can execute all library functions in your own code.

9.1.2.4 Microsoft Visual Basic .NET

You will need to integrate the following files:

- **EposCmd.Net.dll** – .Net assembly
- **EposCmd.dll/ EposCmd64.dll** – Dynamic link library

Proceed as follows:

- 1) Copy the files to the working directory of your project.
- 2) Add the .NET assembly "EposPCmd.Net.dll" to the project references using the project tree in "Solution Explorer". Click right on **Add**, select **Existing Item**, select the file, and click **Add**.

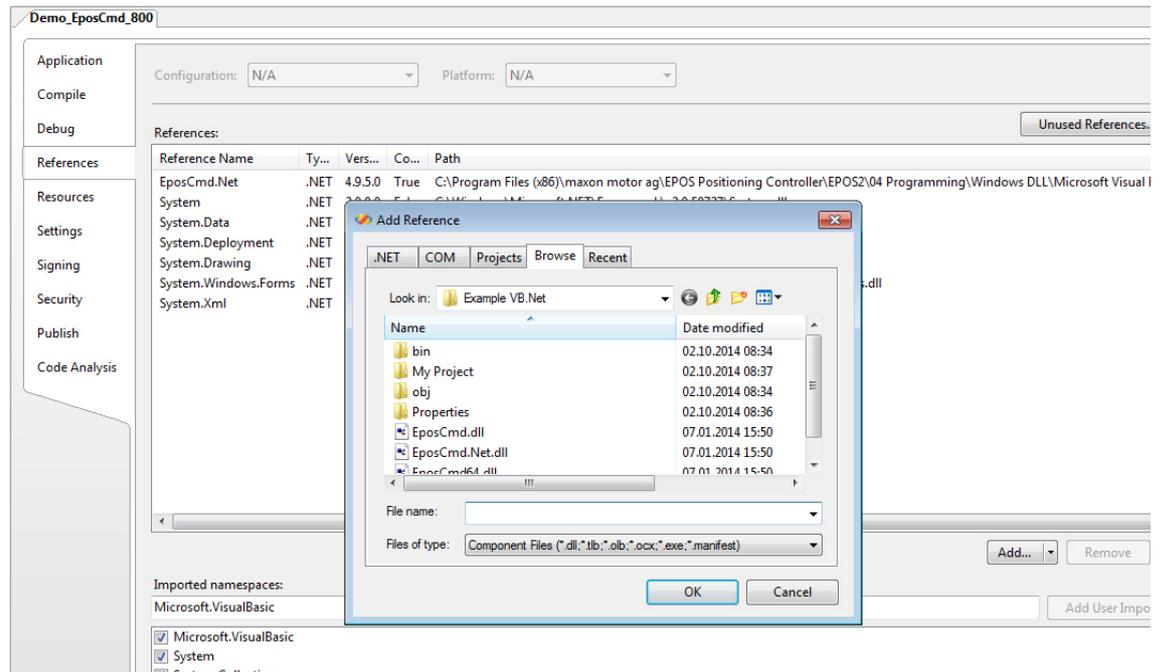

Figure 9-27 Visual Basic .NET – Adding modules

- 3) Choose one of the two ways:
 - a) Copy the file "EposCmd.dll" (for Windows 32-bit) or "EposCmd64.dll" (for Windows 64-bit) into the release directory.
 - b) Open menu **Properties**, switch to the **Compile** tab and type ".\" into the **Build output path** edit line.

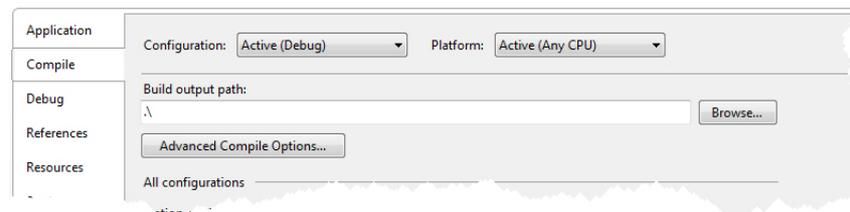

Figure 9-28 Visual Basic .NET – Output path

Continued on next page.

- 4) Now, you can execute all library functions in your own code.

Remark

For further details and parameter description of the *EposCmd.Net* wrapper → separate document «*EposCmd.Net.chm*».

9.1.2.5 Microsoft Visual C#

You will need to integrate the following files:

- **EposCmd.Net.dll** – .Net assembly
- **EposCmd.dll/ EposCmd64.dll** – Dynamic link library

Proceed as follows:

- 1) Copy the files to the working directory of your project.
- 2) Setup the using directory in your program code using the instruction “using *EposCmd.Net*;”.
- 3) Add the file “*EposCmd.Net*” to the project using the project tree in “Solution Explorer”. Click right on «References», select «Add Reference», select the file, and click «OK».

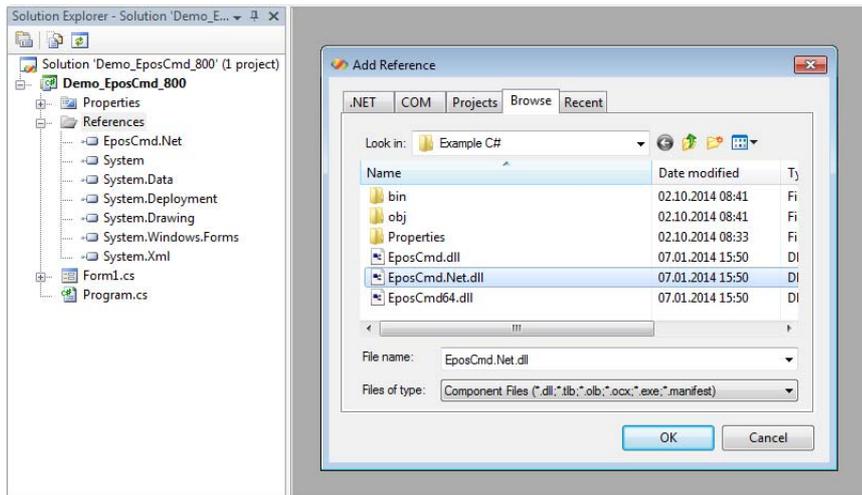

Figure 9-29 Visual C# – Project settings

- 4) Now, you can execute all library functions in your own code.

Remark

For further details and parameter description of the *EposCmd.Net* wrapper → separate document «*EposCmd.Net.chm*».

9.1.2.6 Microsoft Visual C++

You will need to integrate the following files:

32-bit

- **Definitions.h** – Constant definitions and declarations of library functions
- **EposCmd.dll** – Dynamic link library
- **EposCmd.lib** – Import library (COFF format)

64-bit

- **Definitions.h** – Constant definitions and declarations of library functions
- **EposCmd64.dll** – Dynamic link library
- **EposCmd64.lib** – Import library (COFF format)

Proceed as follows:

- 1) Copy the files to the working directory of your project.
- 2) Include the file “Definition.h” to your program code using the instruction “#include Definitions.h”.
- 3) Add the library to your project using menu “Project\Properties”. Select “Linker\Input” from the tree and type the file name “EposCmd.lib” (for Windows 32-bit) or “EposCmd64.lib” (for Windows 64-bit) into the “Additional Dependencies” edit line.

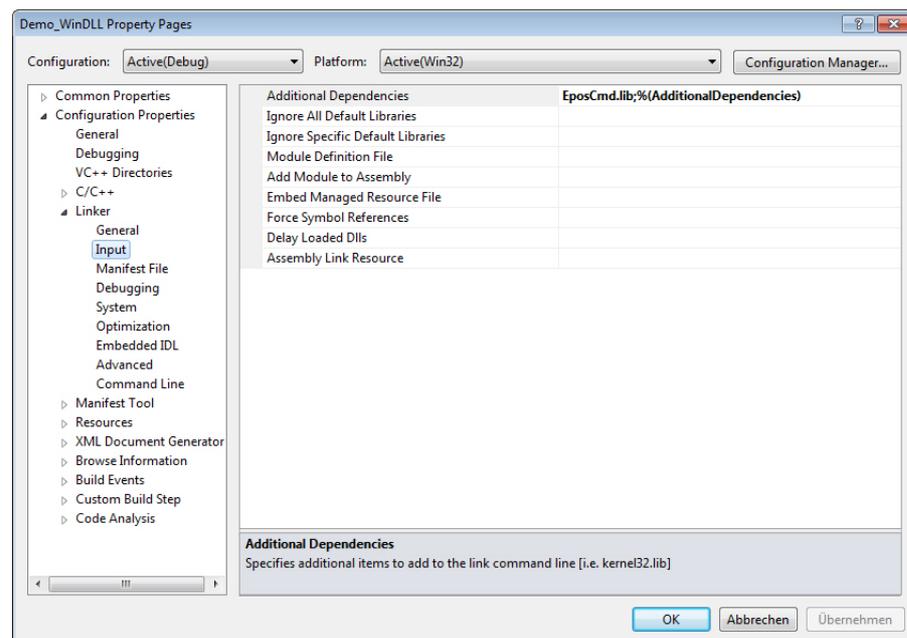

Figure 9-30 Visual C++ – Project settings

- 4) Now, you can execute all library functions in your own code.

Best Practice

Use the calling convention `__stdcall`. It will manage how the parameters are put on the stack and how the stack will be cleaned once executed.

9.1.2.7 National Instruments LabVIEW

For an easy start with LabVIEW programming, most of the function blocks are already configured in a LabVIEW project structure.

VIs are supported with LabVIEW 2010 and higher.

Proceed as follows:

Either start the LabVIEW project “maxon EPOS.lvproj” or add the complete folder “maxon EPOS” to your project.

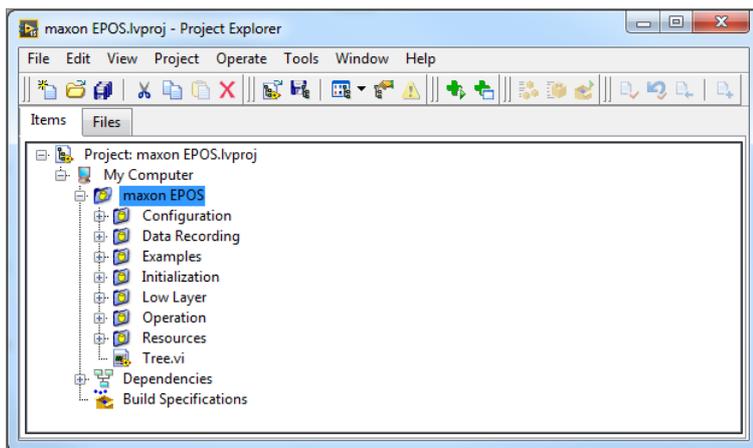

Figure 9-31 LabVIEW – Project Structure

9.1.2.8 National Instruments LabWindows

You will need to integrate the following files:

32-bit

- **Definitions.h** – Constant definitions and declarations of library functions
- **EposCmd.dll** – Dynamic link library
- **EposCmd.lib** – Import library

64-bit

- **Definitions.h** – Constant definitions and declarations of library functions
- **EposCmd64.dll** – Dynamic link library
- **EposCmd64.lib** – Import library

Import Library (*.lib)

The import library is dependent on compiler:

- For Borland compiler use the file from the directory "...\\borland".
- For Microsoft Visual C++ compiler use the file from the directory "...\\msvc".

Proceed as follows:

- 1) Copy the files to the working directory of your project.
- 2) Include the file "Definition.h" to your program code using the instruction "#include Definitions.h".
- 3) Add the files...
 - "Definitions.h", "EposCmd.dll", "EposCmd.lib" (for Windows 32-bit) or
 - "Definitions.h", "EposCmd64.dll", "EposCmd64.lib" (for Windows 64-bit)
 ... to your project using menu "Edit/Add to project".
 Click "All Files...", select the files, and click "Add".

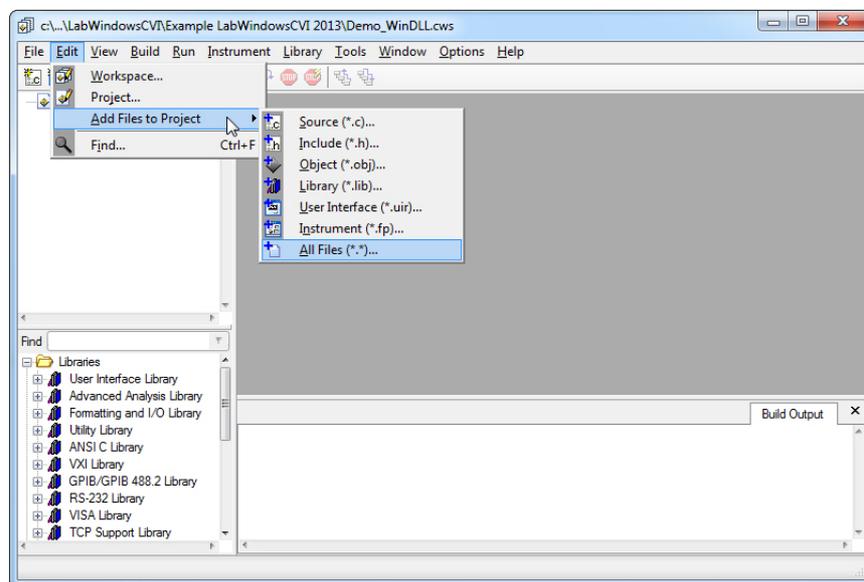

Figure 9-32 LabWindows – add files to project

- 4) Now, you can execute all library functions in your own code.

Best Practice

Use the calling convention `__stdcall`. It will manage how the parameters are put on the stack and how the stack will be cleaned once executed.

9.1.3 Programming

For correct communication with the EPOS, you must execute an initialization function before the first communication command. The fundamental program flow is as follows:

INITIALIZATION

Execute the functions at the beginning of the program.

| Function | Description |
|------------------------------|--|
| VCS_OpenDevice | Initialization of the port with the user data. Use the help functions for information on the interface settings. |
| VCS_OpenDeviceDlg | Initialization of the port. The dialog shows all available communication ports. |
| VCS_SetProtocolStackSettings | Initialization of the new baud rate and timeout |
| VCS_ClearFault | Deletes possibly existent errors/warnings |

HELP

Use the functions if you do not exactly know how your interface is configured.

| Function | Description |
|-----------------------------------|--|
| VCS_GetDeviceNameSelection | Returns available DeviceNames for function VCS_OpenDevice |
| VCS_GetProtocolStackNameSelection | Returns available ProtocolStackNames for function VCS_OpenDevice |
| VCS_GetInterfaceNameSelection | Returns available InterfaceNames for function VCS_OpenDevice |
| VCS_GetPortNameSelection | Returns available PortNames for function VCS_OpenDevice |

COMMUNICATION WITH EPOS

Choose any of the EPOS commands.

| Function | Description |
|-------------------------|--|
| VCS_OperationMode | Set the operation mode (Position Mode, Profile Position Mode, Current Mode, ...) |
| VCS_GetEncoderParameter | Read all encoder parameters |
| etc. | |

CLOSING PROCEDURE

Release the port before closing the program.

| Function | Description |
|---------------------|--------------------------|
| VCS_CloseDevice | Release the opened port |
| VCS_CloseAllDevices | Release all opened ports |

9.1.3.1 Examples

Applicability

- For an universally valid example applicable for most programming environments → [Demo_WinDLL](#).
- For a National Instruments LabView-specific example → [LabVIEW](#).

Best Practice

Prior starting one of the example programs, set the control parameters (e.g. motor, sensor, and regulator parameters). Use the «EPOS Studio» for configuration.

DEMO_WINDLL

The example “Demo_WinDLL” is a dialog-based application. It demonstrates how to configure communication with the EPOS device.

- 1) A configuration dialog will open as you adjust your communication settings.
- 2) At the beginning, the EPOS is set into “Profile Position Mode”. Initialization is programmed in the member function **Create()** of the class **Demo_WinDLL**. The opened port is released at the end in the function **Destroy()**.
- 3) You can execute the EPOS commands by clicking the buttons.
 - VCS_SetEnableState
 - VCS_SetDisableState
 - VCS_MoveToPosition
 - VCS_HaltPositionMovement

The function **VCS_MoveToPosition** may be used as absolute or relative positioning. Click «Device Settings» to change your communication settings.

A timer triggers a periodical update of the state and actual position. The function **UpdateStatus()** will be executed every 100 ms. If an error occurs during the update of the state, the timer is stopped and an error report is displayed.

LABVIEW

The maxon EPOS instrument driver contains the following example VIs:

MOVEWITHVELOCITY

Example to perform a velocity movement showing how to...

- initialize and close an interface (e.g. USB)
- start a velocity movement with correct operation mode
- wait until the target velocity is reached (e.g. 5 seconds)

MOVETORELATIVEPOSITION

Example to do a relative position step showing how to...

- initialize and close an interface (e.g. USB)
- start positioning with correct operation mode
- wait until the target position is reached

DATARECORDER

Example to configure and use the data recording functions showing how to...

- initialize and close an interface (e.g. USB)
- configure the data recorder
- start relative positioning
- display the recorded data (position, velocity, current)

GUI DEMO

Example on how to work with maxon EPOS VIs showing how to...

- initialize and close an interface (with a dialog)
- configure parameters and data
- enable/disable a device
- start/stop a relative movement
- configure profile and node settings
- use the data recorder
- update actual values

MOVEWITHIPM

Example on how to do an IPM trajectory showing how to...

- initialize and close an interface (e.g. USB)
- configure interpolated position mode parameters
- start IPM trajectory
- add PVT reference points
- stop IPM trajectory

9.2 Linux

9.2.1 Overview

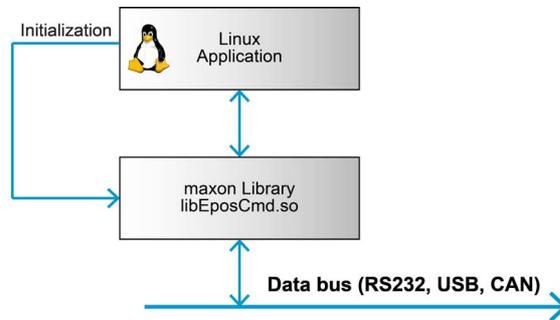

Figure 9-33 Linux – Library hierarchy

The Linux library supports communication interfaces and system architectures as shown in the following table:

| Interface | Architecture | | | | | |
|-----------|---------------|------------------|--------------|-------|--------------|---|
| | Intel | | ARM | | | |
| | 32-bit X86 | 64-bit X86_64 | 32-bit V6 | V7/V8 | 64-bit V8 | |
| RS232 | X | X | — | X | — | |
| USB | X | X | X | X | X | |
| CAN | IXXAT | X | X | — | X | — |
| | Kvaser | X | X | — | X | — |
| | PiCAN2 | — | — | — | X | — |
| | MTTCAN | — | — | — | — | X |

Table 9-44 Supported platforms, architectures, and interfaces

Tested setups

- **x86 / x86_64:** Tested on Ubuntu 12.04, 14.04 and 16.04 32/64-bit
- **ARMv6 32-bit:** Tested on Raspberry Pi Zero, Raspbian Stretch
- **ARMv7/v8:** Tested on Raspberry Pi 2/3, Raspbian Stretch 32-bit
- **ARMv7/v8 - IXXAT:** Requires modification of the official IXXAT installation script (install USB only)
- **ARMv8 64-bit:** Tested on NVIDIA Jetson TX2, Ubuntu 16.04, R28, revision 2.1

9.2.1.1 Tested CAN Interfaces and Drivers

Communication via CAN interfaces works through the SocketCAN driver and networking stack. Depending on the CAN interface model and brand you might need to install special drivers or upgrade the Linux kernel of your system.

The following CAN adapters and driver versions were successfully tested:

IXXAT (IXXAT SocketCAN Driver 1.1.138)

- IXXAT USB-to-CAN V2 Professional
- IXXAT USB-to-CAN V2 Compact

Kvaser (SocketCAN kernel driver)

- Kvaser Leaf Light v1
- Kvaser Leaf Light v2 (supported by Ubuntu 14.04 and newer)

SK Pang (SocketCAN kernel driver)

- PiCAN2 (based on MCP2511 CAN transceiver)
- Nvidia Jetson TX2 (MTTCAN SocketCAN driver), built-in CAN Interface with additional CAN transceiver

Other CAN adapters

Other CAN adapters might work with the library as well (SocketCAN interface driver required) but have not been tested.

9.2.2 Installation / Uninstallation

9.2.2.1 Unzipping the EPOS_Linux_Library

Unzip the EPOS_Linux_Library package:

```
$unzip EPOS_Linux_Library.zip -d .
```

NOTE: If the unzip program is not available, you can install it using the following command:

```
$sudo apt-get install unzip
```

9.2.2.2 Installing the EPOS Command Library

Go to the directory "EPOS_Linux_Library":

```
$cd EPOS_Linux_Library
```

The install.sh script installs the EPOS Command Library and associated files to the directory "/opt/EposCmdLib_<version>" and configures device access rights on the system:

```
$sudo bash ./install.sh
```

NOTE: install.sh script requires sudo (root privileges)

Continued on next page.

```
alg_sys@ubuntu:~/EPOS_Linux_Library$ ls
examples include install.sh lib misc
alg_sys@ubuntu:~/EPOS_Linux_Library$ sudo bash ./install.sh
-----
EPOS Command Library 6.3.0.6 installation started
-----
- Remove existing installation [OK]
- Install library into directory: /opt/EposCmdLib 6.3.0.6 [OK]
- Install examples into directory: /opt/EposCmdLib 6.3.0.6 [OK]
- Library system integration [OK]
- Configure device access rights [OK]
udev stop/waiting
udev start/running, process 55502
- Configure user access rights [OK]
-----
EPOS Command Library 6.3.0.6 installed
-----
```

Figure 9-34 EPOS Command Library installation

After successful installation, the EPOS Command Library is ready for use.

9.2.2.3 Uninstalling the EPOS Command Library

Go to the package directory:

```
$cd EPOS_Linux_Library
```

Execute the uninstall script:

```
$sudo bash ./install.sh -u
or
$sudo bash ./install.sh --uninstall
```

```
alg_sys@ubuntu:~/EPOS_Linux_Library$ sudo bash ./install.sh -u
-----
EPOS Command Library 6.3.0.6 deinstallation started
-----
- Reconfigure user access rights [OK]
- Reconfigure device access rights [OK]
udev stop/waiting
udev start/running, process 55551
- Remove library system integration [OK]
- Remove existing installation [OK]
-----
EPOS Command Library 6.3.0.6 uninstalled
-----
```

Figure 9-35 EPOS Command Library uninstallation

NOTE: The script will only uninstall the library version equal to the scripts package version.

9.2.3 Integration into Programming Environment

You will need to integrate the following files in your projects:

- **Definitions.h** – Constant definitions and declarations of library functions
- **libEposCmd.so.<major>.<minor>.<rev>.0** – EPOS Linux shared library

9.2.4 Programming

For details → Windows OS; chapter “9.1.3 Programming” on page 9-160.

The EPOS Linux library supports most of the EPOS commands. However, **not supported** are the following commands:

- DataRecorder commands
- Export/Import parameters commands
- GUI-related commands (such as VCS_OpenDeviceDlg)

9.2.4.1 Examples

HelloEposCmd

The demo program (source code) is available either in the package “EPOS_Linux_Library.zip” or after library installation in the directory “/opt/EposCmdLib_<version>/examples/HelloEposCmd”.

HelloEposCmd build and execution

```
$cd /opt/EposCmdLib_<version>/examples/HelloEposCmd
$make
$./HelloEposCmd
```

NOTE: If the make program is not available, you can install it using the following command:

```
$sudo apt-get install build-essential
```

The main purpose of HelloEposCmd is to show the basic concept of how to use the EPOS Command Library in a custom C++ application:

- Open and close communication with the device
- Get and set communication parameters
- Selected mode demo: Profile Velocity Mode (PVM), Profile Position Mode (PPM)

The HelloEposCmd application contains useful command line parameters. Some of them can be used to identify the controller’s communication interface parameters for use with the EPOS Command Library later on.

-h: print out the command line parameters overview

```
alg_sys@ubuntu:~/HelloEposCmd$ ./HelloEposCmd -h

10 VERSION HISTORY

10.1 Windows Operating Systems

| Date [D / M / Y] | Library version | Documentation edition | Description |
|---------------------|--------------------|--------------------------|---|
| 21.04.2020 | 6.6.2.0 | 2020-04 | Bugfix: EPOS4 VCS_GetAllDigitalInputs - Enable, Quickstop Bugfix: EPOS4 Data Recording Functions - Channel size, time unit Bugfix: EPOS4 VCS_UpdateFirmware - Not blocked via CANopen Bugfix: CANopen IXXAT Interfaces VCI-V4 bugfixes |
| 02.12.2019 | 6.6.1.0 | 2019-11 | New: Support of data recording functions for EPOS4 devices Bugfix: EPOS4 VCS_SetEnableState - Returns an error code when command fails Bugfix: EPOS2 VCS_ActivateAnalogCurrentSetpoint, VCS_ActivateAnalogVelocitySetpoint, VCS_ActivateAnalogPositionSetpoint - Support negative scaling values |
| 18.12.2018 | 6.5.1.0 | December 2018 | New: API VCS_AnalogOutputConfiguration New: API VCS_GetAnalogInputVoltage New: API VCS_GetAnalogInputState New: API VCS_SetAnalogOutputVoltage New: API VCS_SetAnalogOutputState New: API VCS_GetControllerGain, VCS_SetControllerGain New: API VCS_SendNMTService support for EPOS4 Obsolete functions (do not use): VCS_SetCurrentRegulatorGain, VCS_SetPositionRegulatorGain, VCS_SetPositionRegulatorGainFeedForward, VCS_SetVelocityRegulatorGainFeedForward, VCS_SetVelocityRegulatorGain, VCS_GetCurrentRegulatorGain, VCS_GetPositionRegulatorGain, VCS_GetPositionRegulatorGainFeedForward, VCS_GetVelocityRegulatorGainFeedForward, VCS_GetVelocityRegulatorGain |
| 06.08.2018 | 6.4.2.0 | August 2018 | Bugfix: VCS_UpdateFirmware - EPOS4 firmware update stability fixed |
| 08.06.2018 | 6.4.1.0 | May 2018 | New: Support firmware update EPOS4 Bugfix: VCS_SetGatewaySettings - Resetting for EPOS2 fixed Bugfix: VCS_MoveToPosition - Reset 'TargetReached' bit after start |
| 14.12.2017 | 6.3.1.0 | November 2017 | Bugfix: Duplicate issue "Error Cluster From Code.vi" in LabView Instrument Driver resolved Bugfix: USB port enumeration conflicts between EPOS2 and EPOS4 resolved |
| 07.06.2017 | 6.2.1.0 | May 2017 | New: API for mixed gateway topologies EPOS, EPOS2, EPOS4 New: LabView Instrument Driver Update Bugfix: .Net Library: IPM mode starting fixed |
| 20.01.2017 | 6.1.2.0 | January 2017 | Bugfix: EPOS2 USB communication with Windows 10 and USB 3.0 Bugfix: EPOS2 Interpolated Position Mode is not starting profile |
| 25.10.2016 | 6.1.1.0 | October 2016 | New: EPOS4 RS232 communication New: EPOS4 SSI absolute encoder New: Support for IXXAT VCI4 |
| 04.07.2016 | 6.0.1.0 | May 2016 | Documentation update New: Implementation of EPOS4 New: Error codes added New: Appendix A featuring matrix on hardware and supported functions |
| 24.10.2014 | 5.0.1.0 | October 2014 | Documentation update New: Support for Kvaser CAN interfaces New: Support for NI-XNET driver |

Continued on next page.

| Date [D / M / Y] | Library version | Documentation edition | Description |
|---------------------|--------------------|--------------------------|---|
| 17.12.2013 | 4.9.5.0 | December 2013 | Documentation update Bugfix: Function VCS_GetDriverInfo 64-bit variant DataRecorder: Check path (VCS_ExportChannelDataToFile) |
| 22.03.2013 | 4.9.2.0 | March 2013 | Function VCS_ExportParamter: Parameters renamed |
| 04.01.2013 | 4.9.1.0 | December 2012 | New functions: VCS_GetHomingState, VCS_WaitForHomingAttained, VCS_GetVelocityIsAveraged, VCS_GetCurrentIsAveraged |
| 10.10.2012 | 4.8.7.0 | October 2012 | Bugfix: Command Send NMT Service New functions: VCS_GetVelocityRegulatorFeedForward, VCS_SetVelocityRegulatorFeedForward |
| 08.10.2012 | 4.8.6.0 | October 2012 | New: CANopen Vector Interface support for VN1600 series |
| 10.04.2012 | 4.8.5.0 | April 2012 | Bugfix: Sporadic CAN failure with IXXAT VCI V3.3 |
| 02.02.2011 | 4.8.2.0 | February 2011 | Bugfix: NI-LIN device |
| 28.01.2011 | 4.8.1.0 | January 2011 | New: Expand to 64-bit Windows OS and 32-bit Linux OS Bugfix: Segmented Write |
| 28.10.2010 | 4.7.3.0 | November 2010 | Bugfix: VCS_CloseDevice, VCS_CloseAllDevices |
| 11.10.2010 | 4.7.2.0 | October 2010 | Bugfix: Deadlock when closing application fixed Bugfix: Communication for IXXAT VCI V3.3 fixed |
| 30.08.2009 | 4.7.1.0 | August 2010 | New parameters: DialogMode for Findxxx functions New: ProtocolStack Name "MAXON SERIAL V2" (Library is still compatible with old name "EPOS2_USB") Bugfix: VCS_WaitForTargetReached returns false, if timeout elapses |
| 22.10.2009 | 4.6.1.3 | October 2009 | Bugfix: Multithreading |
| 04.09.2009 | 4.6.0.0 | September 2009 | New: Support for EPOS2 functionality, data recorder, parameter export and import, VCS_ReadCANFrame |
| 01.05.2008 | 4.5.0.0 | April 2008 | New: Functions for read device errors (Get Device Error), adaption for EPOS2 |
| 10.08.2007 | 4.4.0.0 | August 2007 | New: Support for IXXAT VCI V3 |
| 01.02.2007 | 4.3.0.0 | January 2007 | New: Support for National Instruments Interfaces |
| 16.10.2006 | 4.2.1.0 | October 2006 | Bugfix: VCS_GetDriverInfo, VCS_SetHomingParameter |
| 11.10.2006 | 4.2.0.0 | October 2006 | New function: VCS_GetErrorInfo(...) |
| 12.04.2006 | 4.1.1.0 | April 2006 | Bugfix: VCS_SendCANFrame |
| 12.04.2006 | 4.1.0.0 | April 2006 | New error codes |
| 03.02.2006 | 4.0.0.0 | February 2006 | Additional information on error codes |
| 01.10.2005 | 4.0.0.0 | October 2005 | Error correction documentation |
| 01.03.2005 | 3.0.0.0 | March 2005 | Insert from Vector CAN cards details |
| 16.07.2004 | 2.0.3.0 | July 2004 | Documentation update New: Additional information on error codes |
| 06.04.2004 | 2.0.0.0 | April 2004 | New functions documented: VCS_CloseAllDevices(...), VCS_DigitalInputConfiguration(...), VCS_DigitalOutputConfiguration(...), VCS_GetAllDigitalInputs(...), VCS_GetAllDigitalOutputs(...), VCS_GetAnalogInput(...), VCS_SetAllDigitalOutputs(...), VCS_SendNMTService(...), VCS_OpenDeviceDlg(...) Changed functions: VCS_GetBaudrateSelection(...), VCS_FindHome(...), VCS_GetHomingParameter(...), VCS_SetHomingParameter(...), VCS_MoveToPosition(...), VCS_GetOperationMode(...), VCS_SetOperationMode(...), VCS_GetObject(...), VCS_SetObject(...) Deleted functions: VCS_GetProtocolStackMode(...), VCS_GetProtocolStackModeSelection(...) |

| Date [D / M / Y] | Library version | Documentation edition | Description |
|---------------------|--------------------|--------------------------|--|
| 05.01.2004 | 1.02 | January 2004 | Insert IXXAT details |
| 01.12.2003 | 1.01 | December 2003 | Changed functions: VCS_GetBaudrateSelection(...), VCS_GetDeviceName(...), VCS_GetDeviceNameSelection(...), VCS_GetDriverInfo(...), VCS_GetInterfaceName(...), VCS_GetInterfaceNameSelection(...), VCS_GetPortName(...), VCS_GetPortNameSelection(...), VCS_GetProtocolStackModeSelection(...), VCS_GetProtocolStackName(...), VCS_GetProtocolStackNameSelection(...) |
| 11.11.2003 | 1.00 | November 2003 | Initial release |

Table 10-45 Version history – Windows OS

10.2 Linux Operating Systems

| Date [D / M / Y] | Library version | Documentation edition | Description |
|---------------------|--------------------|--------------------------|--|
| 21.04.2020 | 6.6.2.0 | 2020-04 | Bugfix: EPOS4 VCS_GetAllDigitalInputs - Enable, Quickstop |
| 02.12.2019 | 6.6.1.0 | 2019-11 | New: Support of data recording functions for EPOS4 devices Bugfix: EPOS4 VCS_SetEnableState - Returns an error code when command fails Bugfix: EPOS2 VCS_ActivateAnalogCurrentSetpoint, VCS_ActivateAnalogVelocitySetpoint, VCS_ActivateAnalogPositionSetpoint - Support negative scaling values Bugfix: Support of IXXAT PCIE CAN adapters Bugfix: Socket CAN interface/port enumeration |
| 18.12.2018 | 6.5.1.0 | December 2018 | New: API VCS_AnalogOutputConfiguration New: API VCS_GetAnalogInputVoltage New: API VCS_GetAnalogInputState New: API VCS_SetAnalogOutputVoltage New: API VCS_SetAnalogOutputState New: API VCS_GetControllerGain, VCS_SetControllerGain New: API VCS_SendNMTService support for EPOS4 New: ARMv8 64-bit (Nvidia Jetson TX2) New: ARMv6 32-bit (Raspberry Pi Zero) Update: FTDI driver 1.4.8 Obsolete functions (do not use): VCS_SetCurrentRegulatorGain, VCS_SetPositionRegulatorGain, VCS_SetPositionRegulatorGainFeedForward, VCS_SetVelocityRegulatorGainFeedForward, VCS_SetVelocityRegulatorGain, VCS_GetCurrentRegulatorGain, VCS_GetPositionRegulatorGain, VCS_GetPositionRegulatorGainFeedForward, VCS_GetVelocityRegulatorGainFeedForward, VCS_GetVelocityRegulatorGain |
| 08.06.2018 | 6.4.1.0 | May 2018 | New: API for mixed gateway topologies EPOS, EPOS2, EPOS4 Improved function not supported handling |
| 14.12.2017 | 6.3.1.0 | November 2017 | New: Support CANopen communication interfaces New: EPOS Linux Library install script Bugfix: Intel Skylake architecture lock elision issue resolved Bugfix: USB port enumeration conflicts resolved |
| 07.06.2017 | 6.2.1.0 | May 2017 | Bugfix: Missing makefile for example added Bugfix: Wrong datatype in Definitions.h fixed |
| 20.01.2017 | 6.1.1.0 | January 2017 | Bugfix: Make file added for example "HelloEposCmd" |
| 25.10.2016 | 6.1.1.0 | October 2016 | New: Implementation of EPOS4 |
| 10.10.2014 | 5.0.1.0 | October 2014 | New: x86_64, arm sf/hf support New functions: VCS_GetDriverInfo Bugfix: VCS_GetErrorInfo |
| 26.04.2013 | 4.9.2.0 | March 2013 | New functions: VCS_GetHomingState, VCS_WaitForHomingAttained, VCS_GetVelocityIsAveraged, VCS_GetCurrentIsAveraged Bugfix: rs232 baudrate |
| 27.07.2012 | 4.9.1.0 | December 2013 | New: kernel 2.6 support Bugfix: IPM mode Update: ftdi driver |
| 14.03.2011 | 4.8.2.0 | February 2011 | Bugfix: USB interface |
| 15.12.2010 | 4.8.1.0 | January 2011 | Initial release |

Table 10-46 Version history – Linux OS

Appendix A — Hardware vs. Functions

In the following tables you can find an overview on the available software functions versus their availability in the respective hardware versions. The tables are compiled in groups for initialization, configuration, operation, data recording, and low layer functions and are sorted in alphabetical order.

A click on the function's designation leads you directly to the detailed functional description.

INITIALIZATION FUNCTIONS

| Designation | EPOS | EPOS2 | EPOS4 |
|--|------|-------|-------|
| VCS_CloseAllDevices | X | X | X |
| VCS_CloseAllSubDevices | X | X | X |
| VCS_CloseDevice | X | X | X |
| VCS_CloseSubDevice | X | X | X |
| VCS_FindDeviceCommunicationSettings | X | X | X |
| VCS_FindSubDeviceCommunicationSettings | X | X | X |
| VCS_GetBaudRateSelection | X | X | X |
| VCS_GetDeviceName | X | X | X |
| VCS_GetDeviceNameSelection | X | X | X |
| VCS_GetDriverInfo | X | X | X |
| VCS_GetErrorInfo | X | X | X |
| VCS_GetInterfaceName | X | X | X |
| VCS_GetInterfaceNameSelection | X | X | X |
| VCS_GetKeyHandle | X | X | X |
| VCS_GetPortName | X | X | X |
| VCS_GetPortNameSelection | X | X | X |
| VCS_GetProtocolStackName | X | X | X |
| VCS_GetProtocolStackNameSelection | X | X | X |
| VCS_GetProtocolStackSettings | X | X | X |
| VCS_GetVersion | X | X | X |
| VCS_OpenDevice | X | X | X |
| VCS_OpenDeviceDlg | X | X | X |
| VCS_OpenSubDevice | X | X | X |
| VCS_OpenSubDeviceDlg | X | X | X |
| VCS_ResetPortNameSelection | | X | X |
| VCS_SetProtocolStackSettings | X | X | X |

Table 11-47 Hardware and their supported functions – Initialization functions

CONFIGURATION FUNCTIONS

| Designation | EPOS | EPOS2 | EPOS4 |
|---------------------------------|------|-------|-------|
| VCS_AnalogInputConfiguration | | X | |
| VCS_AnalogOutputConfiguration | | | X |
| VCS_DigitalInputConfiguration | X | X | X |
| VCS_DigitalOutputConfiguration | X | X | X |
| VCS_ExportParameter | X | X | X |
| VCS_GetControllerGain | X | X | X |
| VCS_GetDcMotorParameter | X | X | X |
| VCS_GetEcMotorParameter | X | X | X |
| VCS_GetHallSensorParameter | X | X | X |
| VCS_GetIncEncoderParameter | X | X | X |
| VCS_GetMaxAcceleration | | X | X |
| VCS_GetMaxFollowingError | X | X | X |
| VCS_GetMaxProfileVelocity | X | X | X |
| VCS_GetMotorType | X | X | X |
| VCS_GetObject | X | X | X |
| VCS_GetSensorType | X | X | X |
| VCS_GetSsiAbsEncoderParameter | | X | X |
| VCS_GetSsiAbsEncoderParameterEx | | | X |
| VCS_GetVelocityUnits | | X | X |
| VCS_ImportParameter | X | X | X |
| VCS_Restore | X | X | X |
| VCS_SetControllerGain | X | X | X |
| VCS_SetDcMotorParameter | X | X | X |
| VCS_SetEcMotorParameter | X | X | X |
| VCS_SetHallSensorParameter | X | X | X |
| VCS_SetIncEncoderParameter | X | X | X |
| VCS_SetMaxAcceleration | | X | X |
| VCS_SetMaxFollowingError | X | X | X |
| VCS_SetMaxProfileVelocity | X | X | X |
| VCS_SetMotorType | X | X | X |
| VCS_SetObject | X | X | X |
| VCS_SetSensorType | X | X | X |
| VCS_SetSsiAbsEncoderParameter | | X | X |
| VCS_SetSsiAbsEncoderParameterEx | | | X |
| VCS_SetVelocityUnits | | X | X |
| VCS_Store | X | X | X |
| VCS_UpdateFirmware | | X | X |

INDEX

A

architectures (supported)
Linux 163
Windows 150

B

Borland C++ (integration into) 151
Borland Delphi (integration into) 152

C

CM (Current Mode) functions 103
configuration functions 35

D

data recording functions 129
data type definitions 12
Delphi (integration into) 152
drivers by 3rd party manufacturers 10

E

End User License Agreement 7
EPOS Command Library, integration of 149
error codes (overview) 145
Error Handling functions 71
EULA 7

F

functions
configuration 35
data recording 129
initialization 13
low layer 141
operation 63
functions for
Current Mode 103
Homing Mode 85
inputs & outputs 111
Interpolated Position Mode 90
Master Encoder Mode 107
Position Mode 95
Profile Position Mode 77
Profile Velocity Mode 81
Step Direction Mode 109
Velocity Mode 99
functions/hardware matrix 173, 179

H

hardware/functions matrix 173, 179
HM (Homing Mode) functions 85
homing methods 87
how to
integrate the «EPOS Command Library» 149
interpret icons (and signs) used in the document 6

I

initialization functions 13
input/output functions 111
interfaces (supported) 150, 163
Linux 163
Windows 150
IPM (Interpolated Position Mode) functions 90
IXXAT (supported devices) 10

K

Kvaser (supported devices) 10

L

LabVIEW (integration into) 158
LabWindows (integration into) 159
legal notice 7
Linux
library hierarchy 163
low layer functions 141

M

manufacturers of supported products 10
MEM (Master Encoder Mode) functions 107
Motion Info functions 73

N

National Instruments (supported devices) 10
NI-CAN 10
NI-XNET 10

O

operation functions 63
Operation Mode functions 63

P

PM (Position Mode) functions 95
PPM (Profile Position Mode) functions 77
purpose of this document 5
PVM (Profile Velocity Mode) functions 81

S

SDM (Step Direction Mode) functions *109*
signs used *6*
State Machine functions *65*
supported products by 3rd party suppliers *10*
symbols used *6*

V

VCI driver *10*
Vector (supported devices) *10*
Visual Basic .NET (integration into) *155*
Visual Basic (integration into) *153*
Visual C# (integration into) *156*
Visual C++ (integration into) *157*
VM (Velocity Mode) functions *99*

W

warranty *7*
Windows
 communication structure *11*
 library hierarchies *149*

X

XL driver *10*
